# 阿里控制台系统提效之路

- 潕量

## 钱陈(潕量)

阿里巴巴业务平台事业部 - 前端技术专家 Alibaba Fusion Design 中后台 / Design System / DPL / 可视化

**控制台系统的现状与问题** 发现问题

**阿里控制台解决方案** 

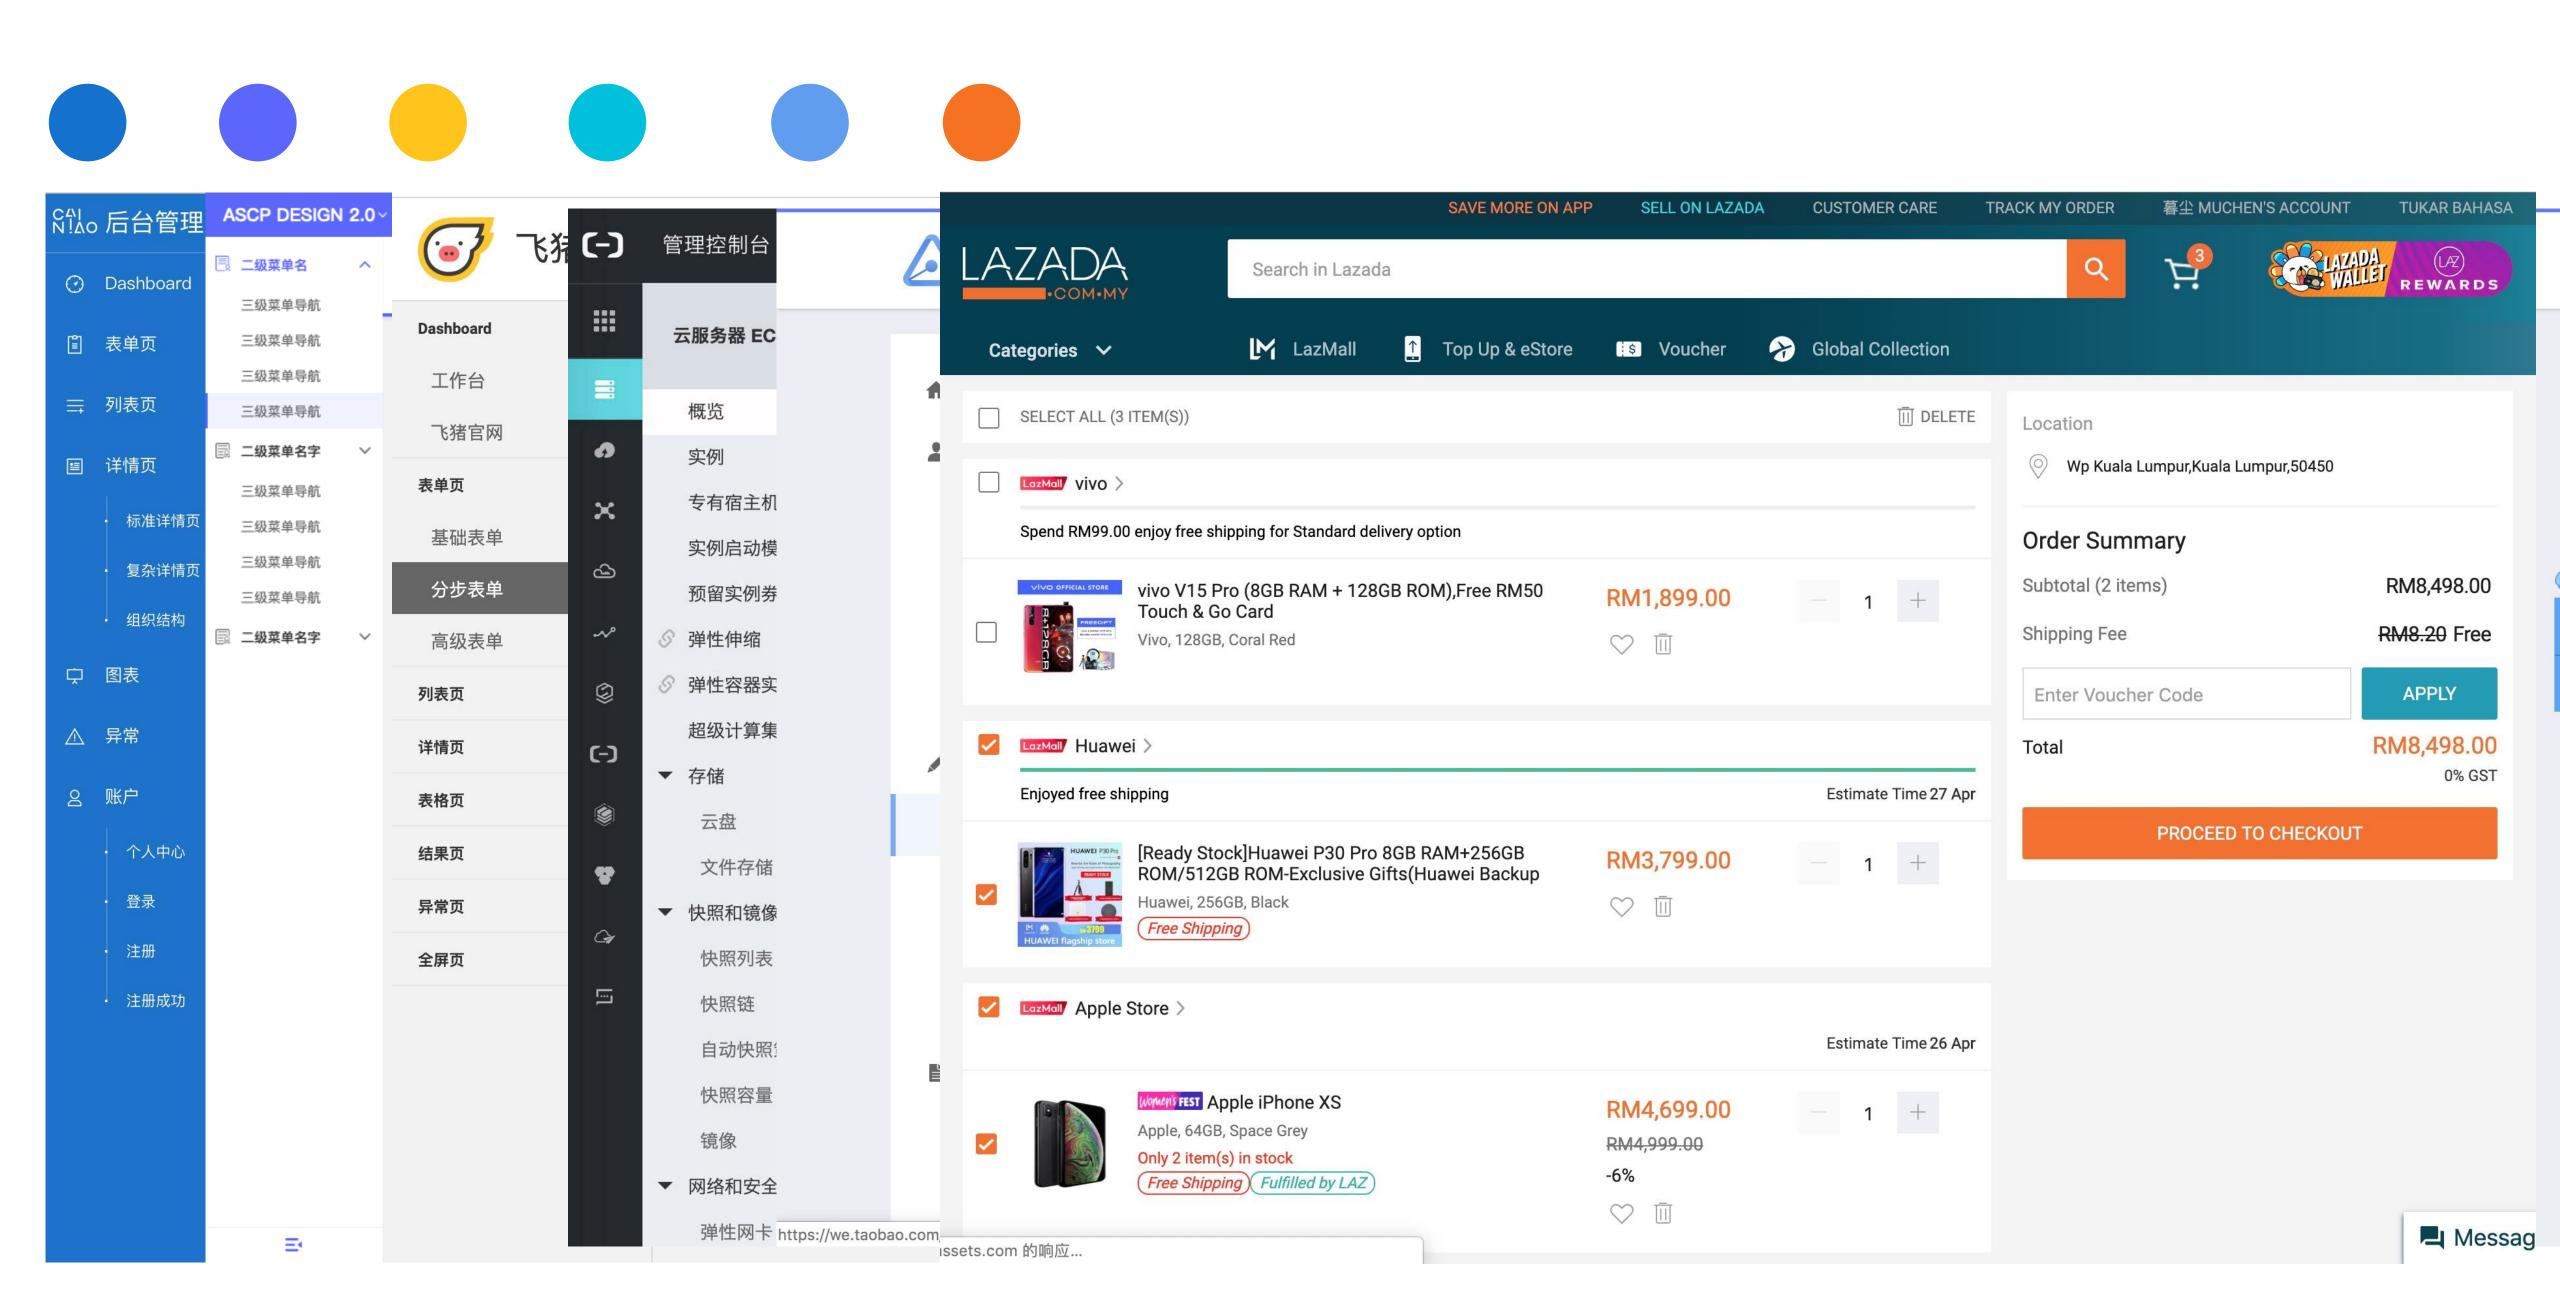

进一步提效的思考

还在建设中,未来可期

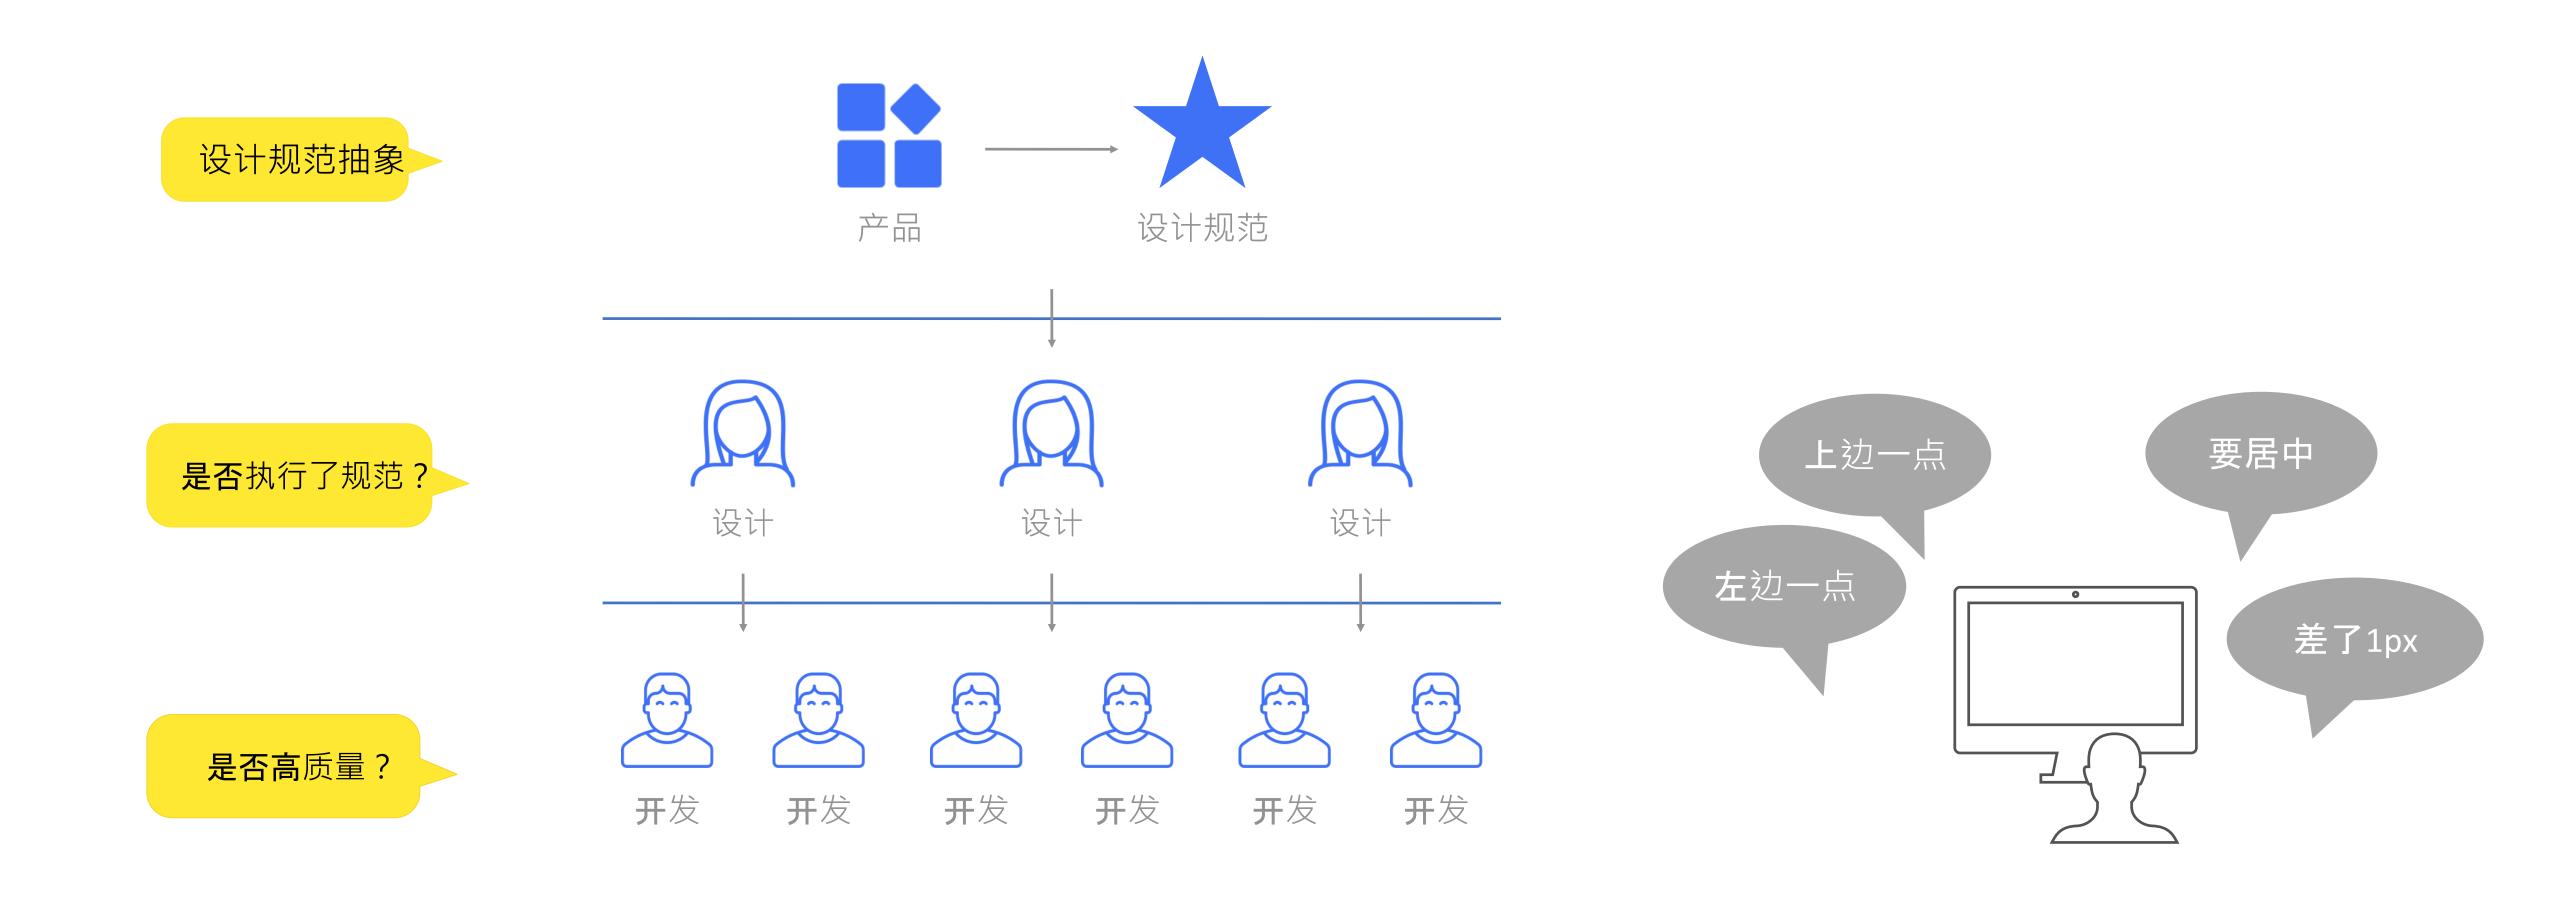

解决问题的理论和方法

# Part 1: 控制台系统的现状与问题

### 设计品牌化 vs 组件库U适配能力

### 规范一致性要求vs设计与开发协同的问题

# Part 2: 阿里控制台解决方案(Fusion)

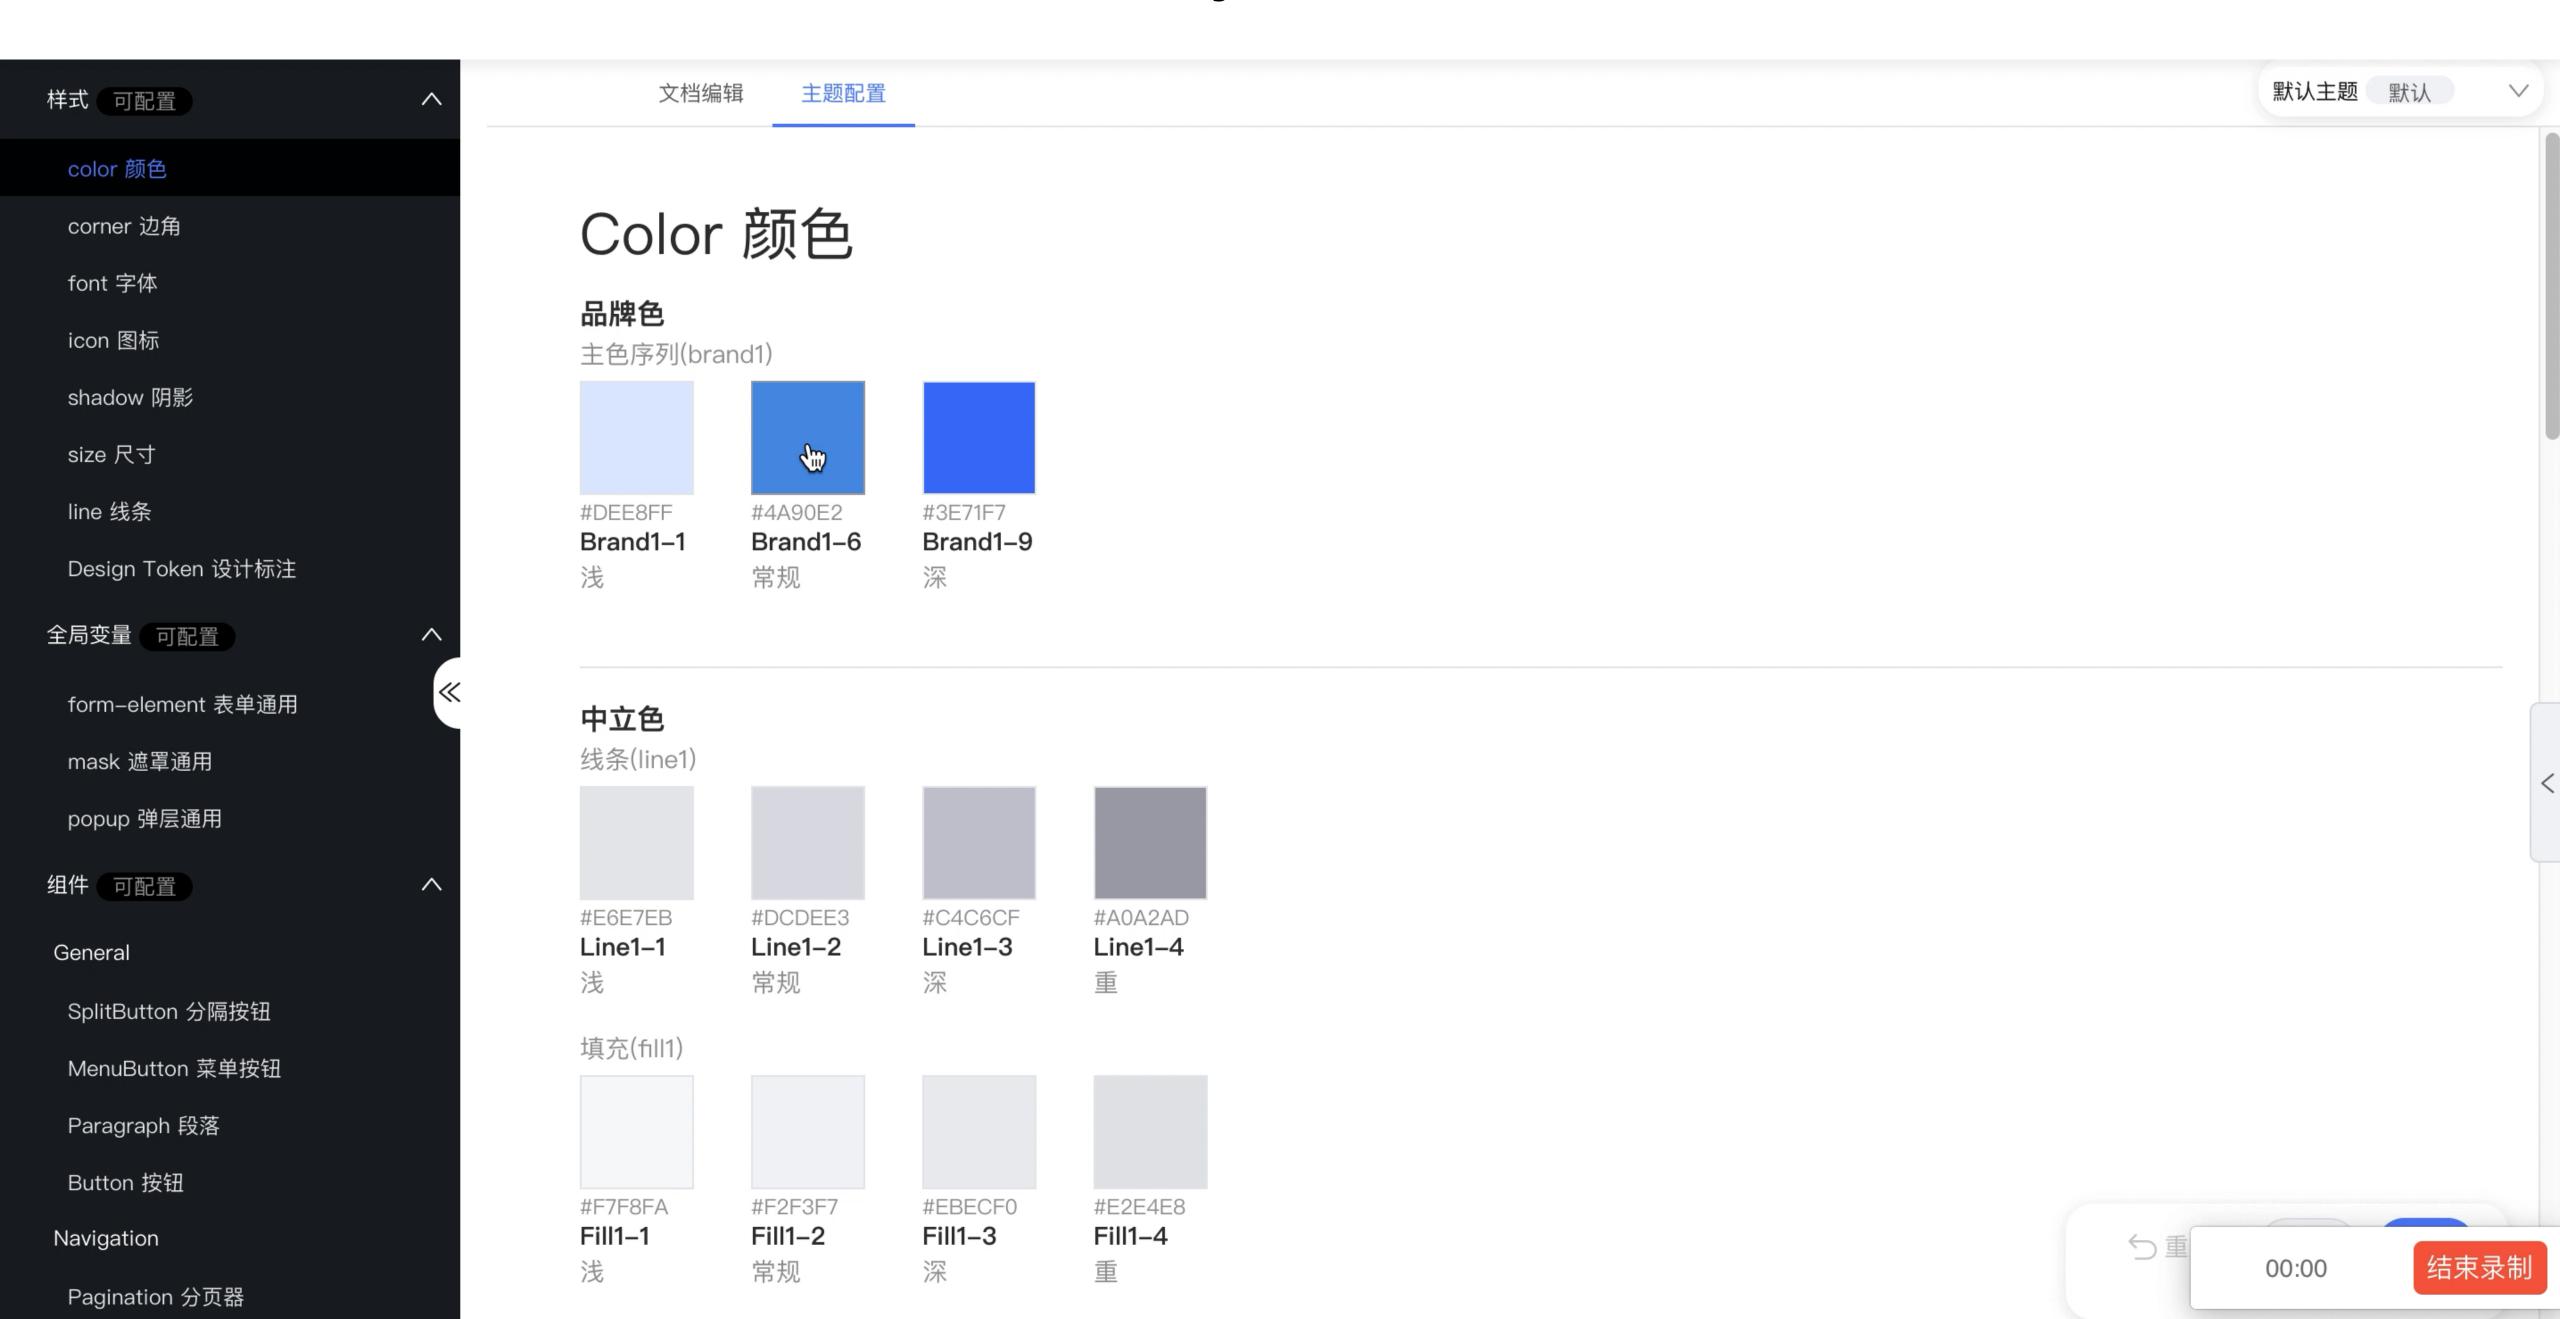

#### 核心解法

- 设计品牌化 vs 组件库UI适配能力
  - 需要一套能够支持各部门品牌皮肤定制诉求的组件库
- 规范一致性要求 vs 设计与开发协同的问题

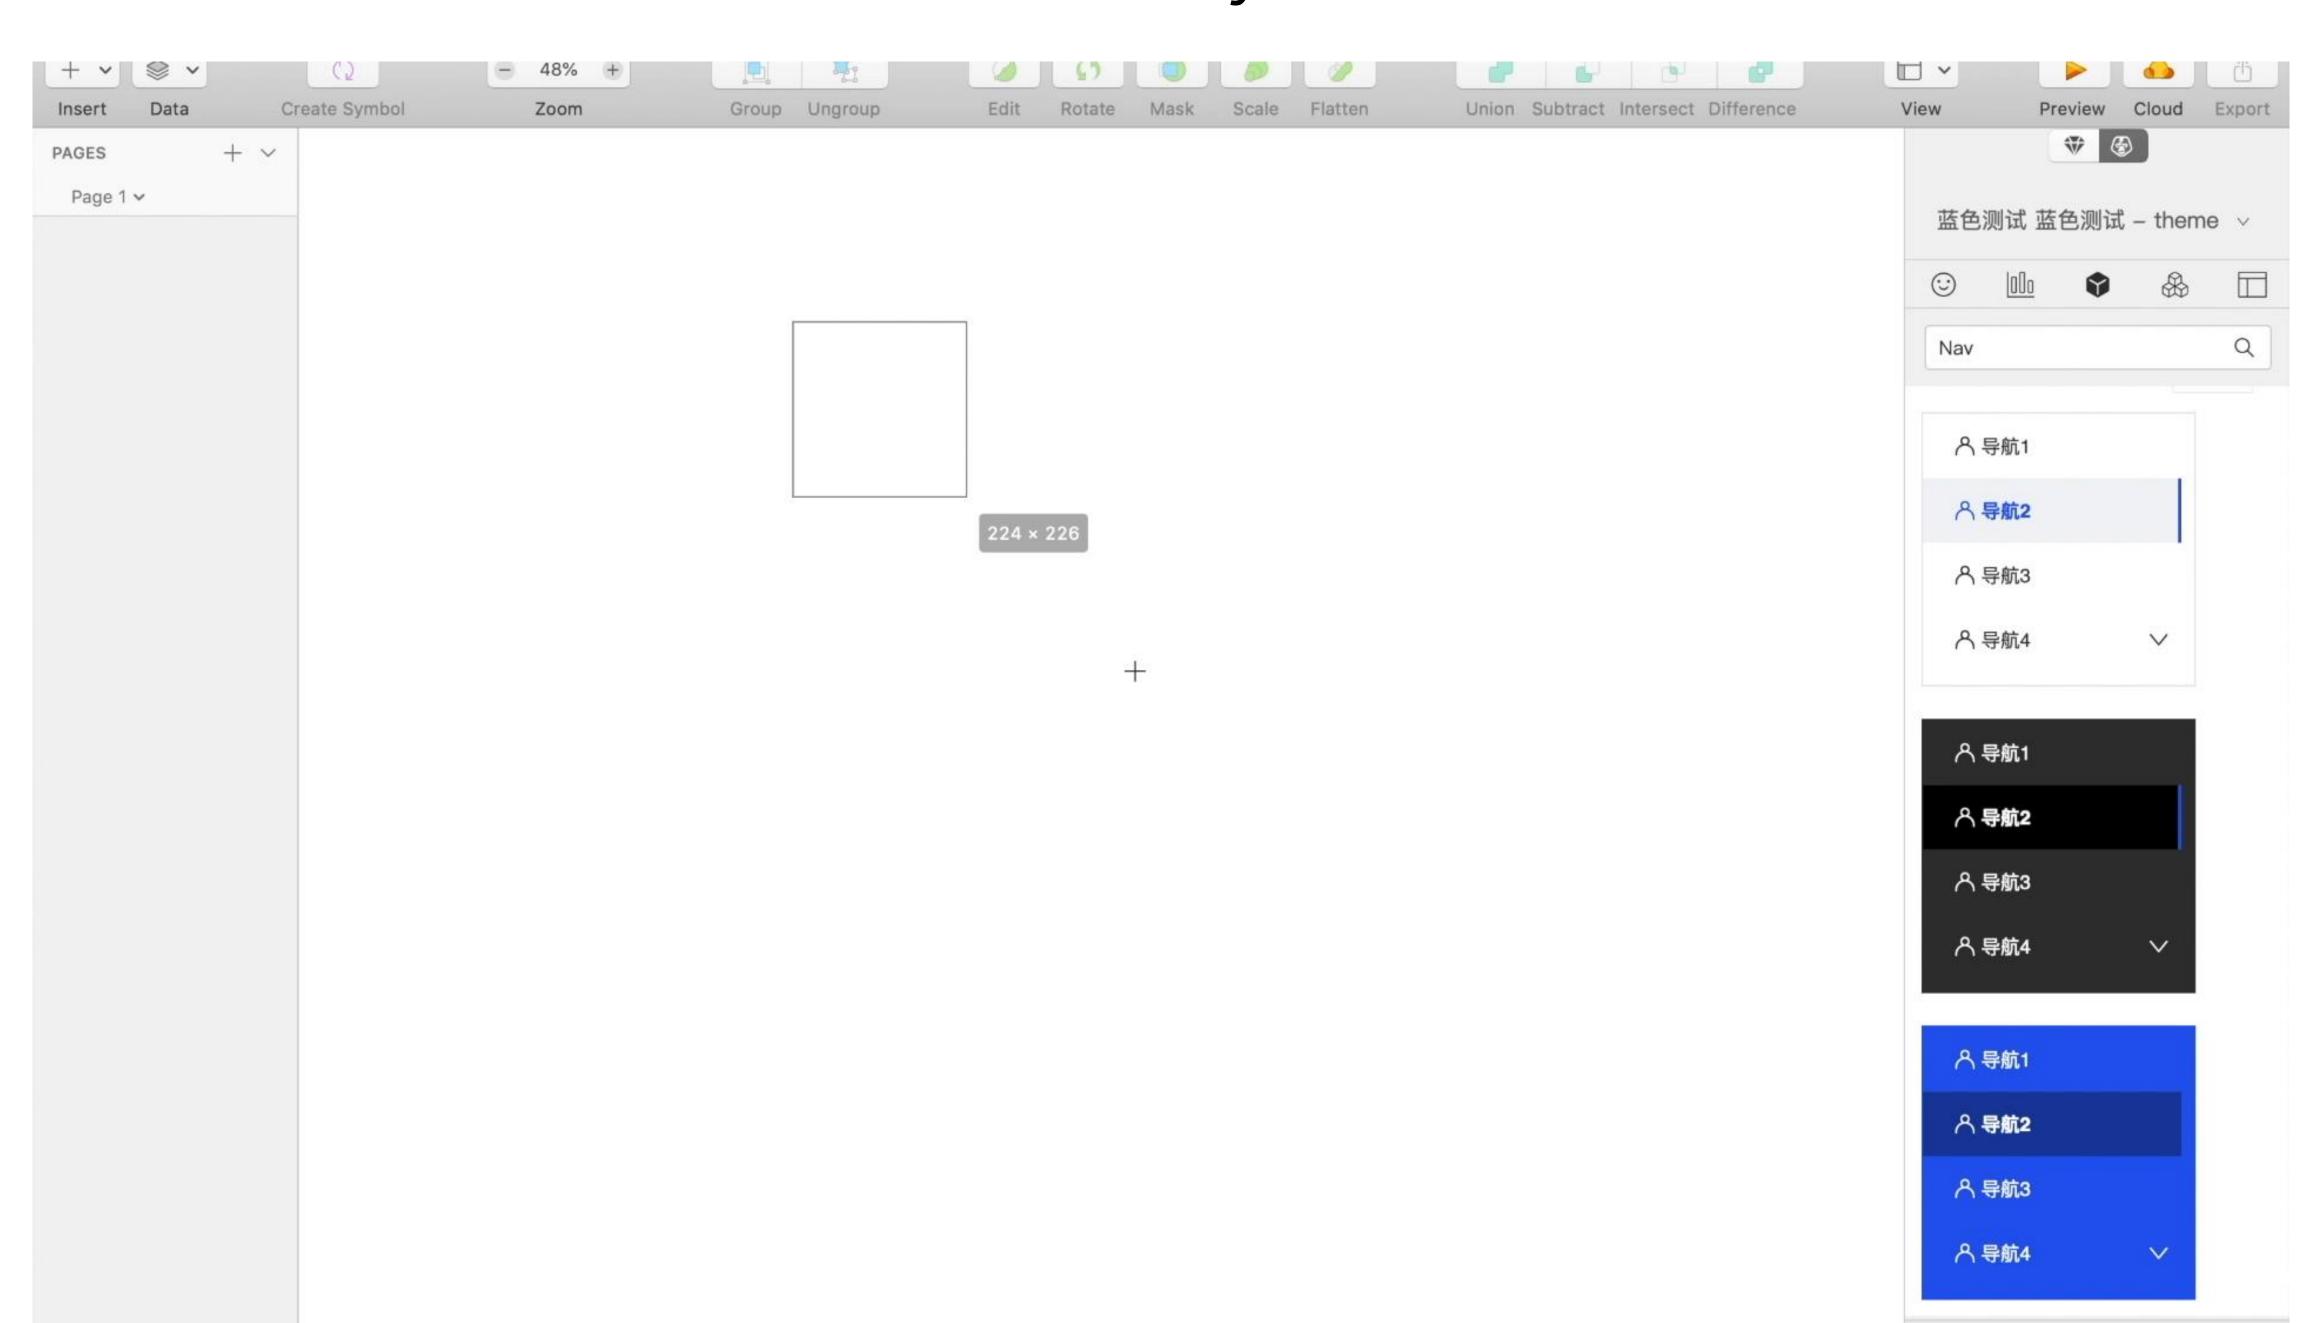

需要一套落实品牌皮肤一致性的工作流机制

案例演示

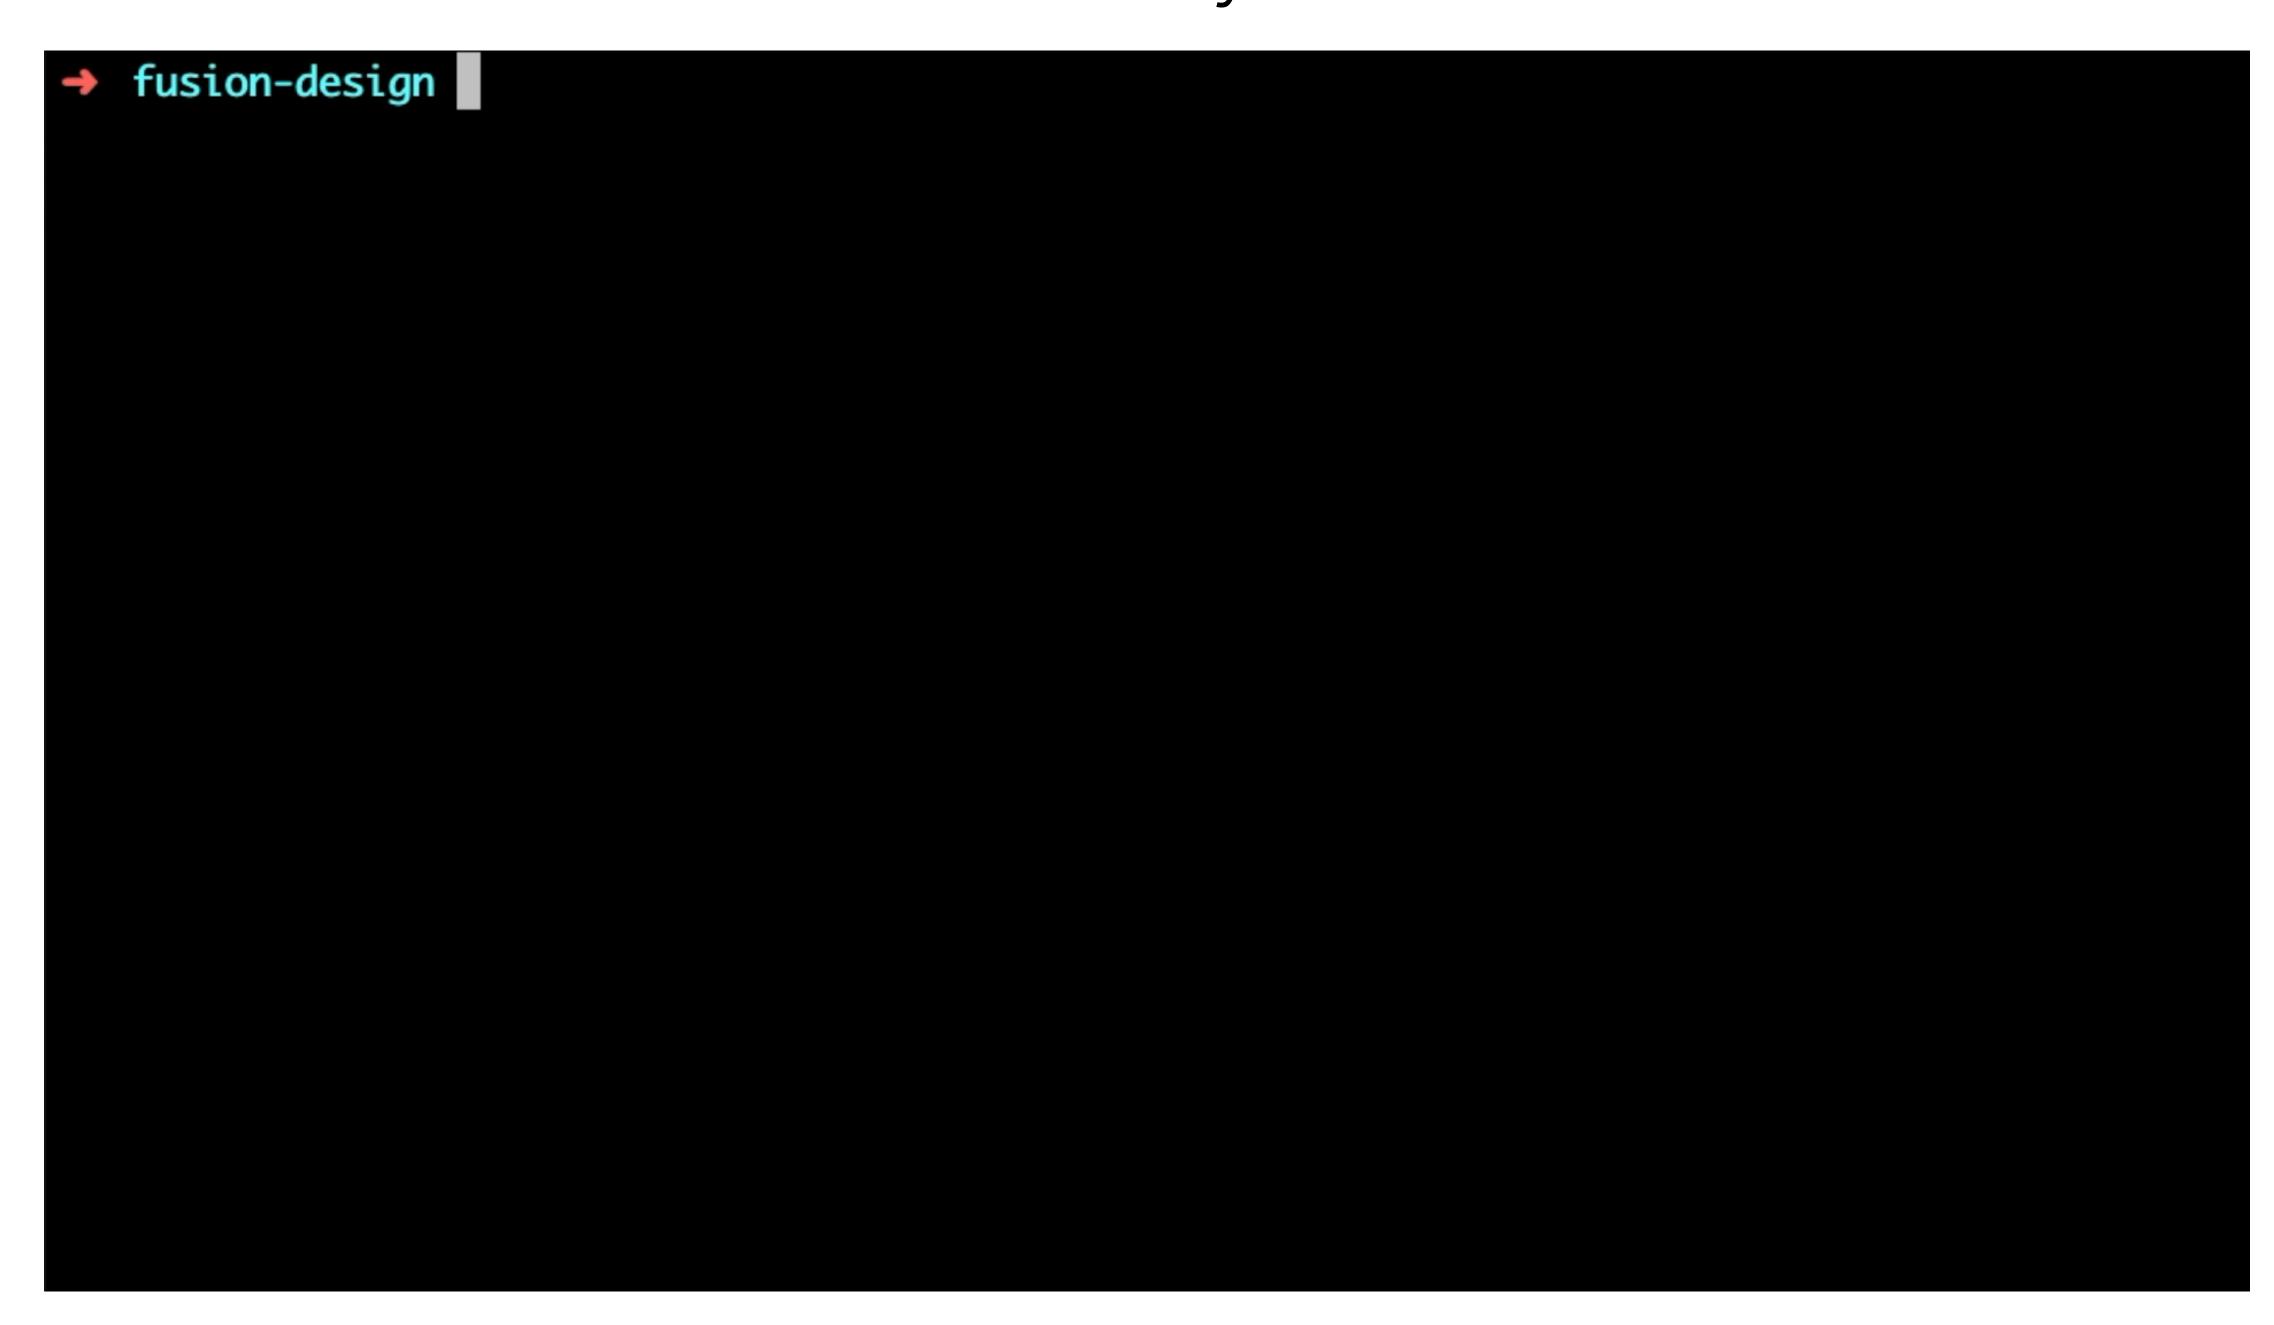

## 案例演示:平台主题配置-by品牌设计负责人

## 案例演示: 页面设计辅助工具 - by 业务设计师

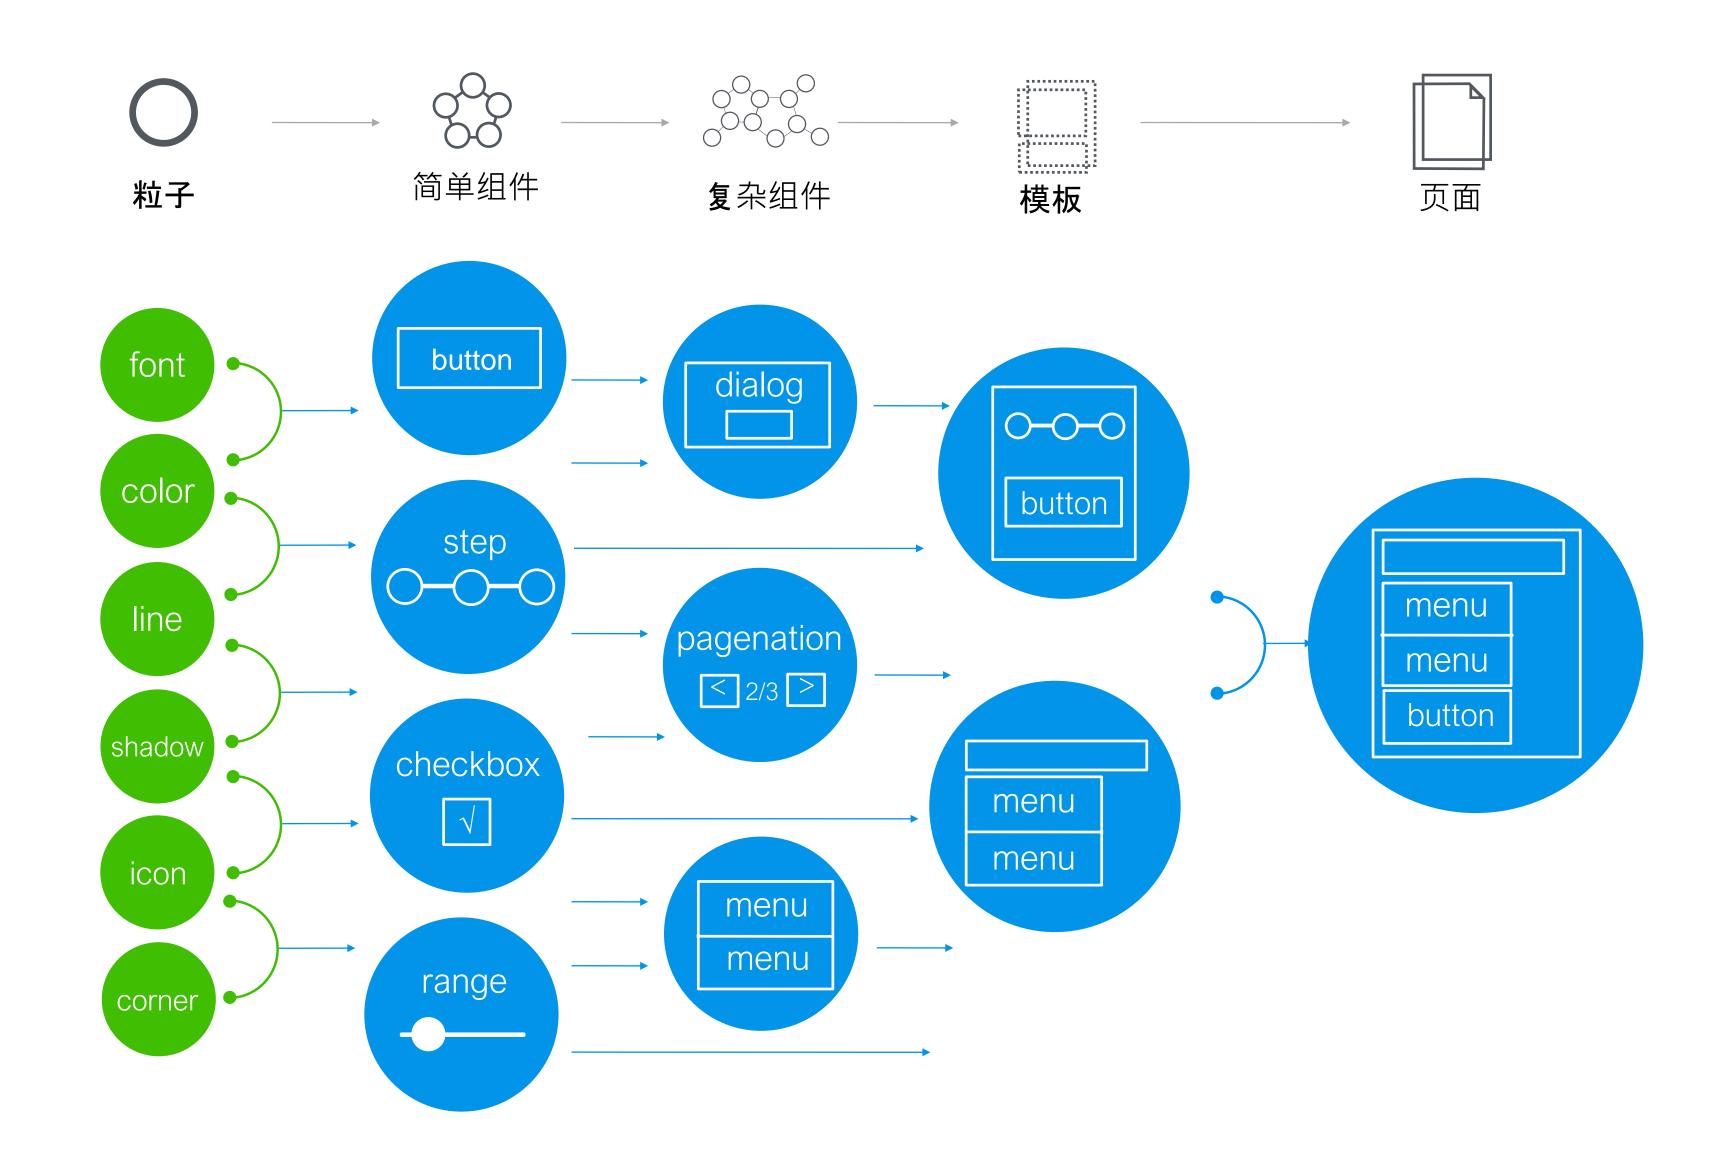

案例演示: 前端项目切换主题 - by 开发者

# 设计品牌化 vs 组件库UI适配能力

需要一套能够支持各部门品牌皮肤定制诉求的组件库

#### 粒子设计原理

#### 粒子

## Design Token

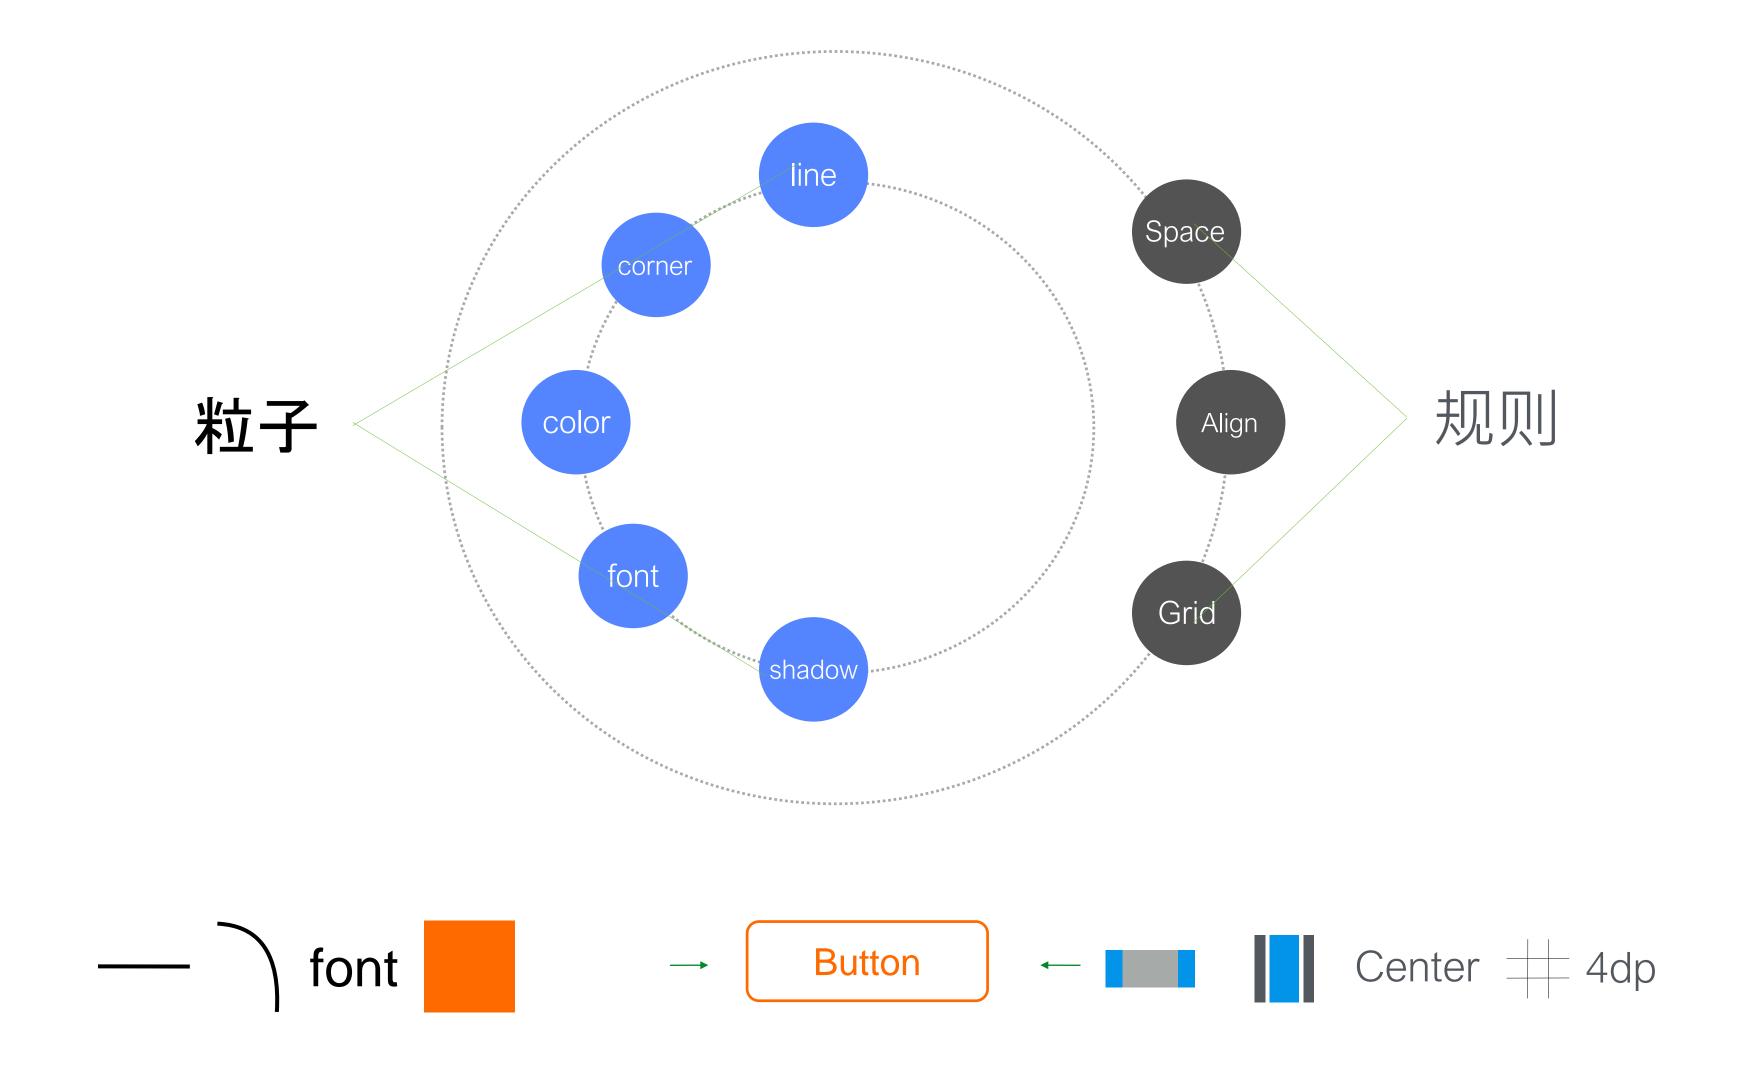

### 粒子理论在前端的实现

                                                                                               /// line-dashed
/// title
                                                                                               /// @export style
/// @semantic 标题-中
                                                                                               /// @group style
/// @group size
                                                                                               /// @unconfigurable
/// @export size
                                                                                                $line-dashed: dashed !default;
$font-size-title: 20px !default;
```

## 组件由粒子组成

#### 组件的变量来自粒子

#### 粒子

```
/// text
/// @namespace statement/normal
$btn-pure-primary-color: $color-white !default;
/// text
/// @namespace statement/hover
$btn-pure-primary-color-hover: $color-white !default;
/// background
/// @namespace statement/normal
$btn-pure-primary-bg: $color-brand1-6 !default;
/// background
/// @namespace statement/hover
$btn-pure-primary-bg-hover: $color-brand1-9 !default;
/// border color
/// @namespace statement/normal
$btn-pure-primary-border-color: $color-transparent !default;
/// border color
/// @namespace statement/hover
$btn-pure-primary-border-color-hover: $color-transparent !default;
/// border style
/// @namespace statement/normal
$btn-pure-primary-border-style: $line-solid !default;
/// corner
/// @namespace statement/normal
$btn-size-m-corner: $corner-1 !default;
```

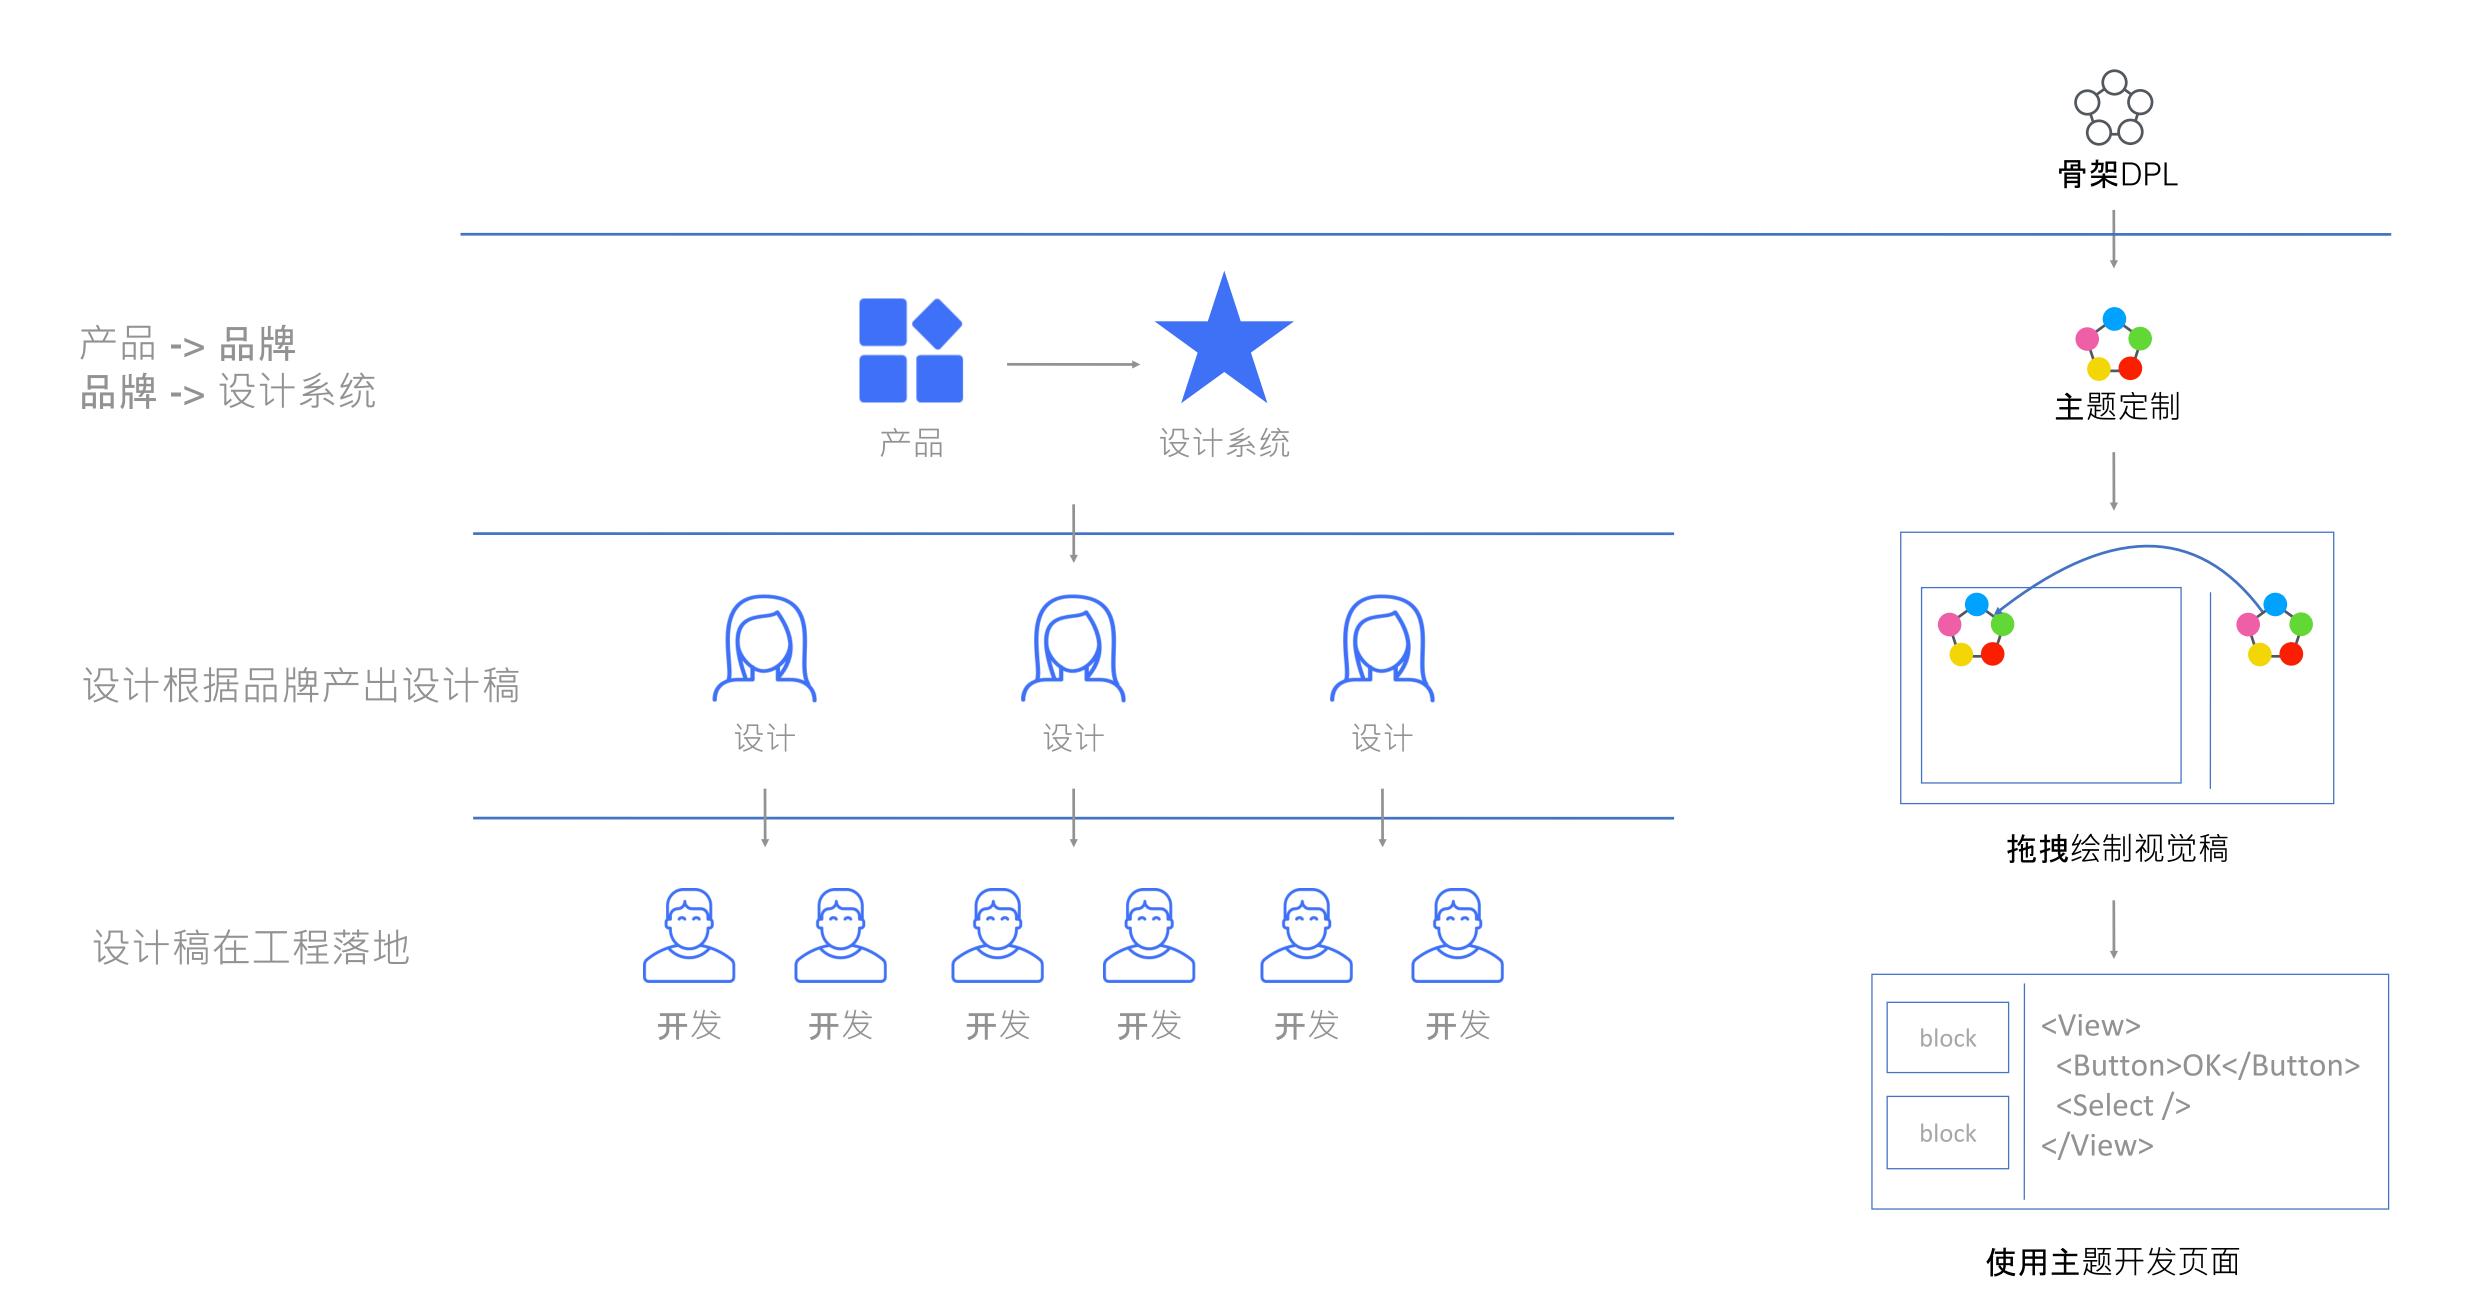

#### 规则

```
/// height
/// @namespace size/bounding
$btn-size-m-height: $s-7 !default;
/// padding
/// @namespace size/bounding
$btn-size-m-padding: $s-3 !default;
/// border width
/// @namespace size/bounding
$btn-size-m-border-width: $line-1 !default;
/// size
/// @namespace size/text
$btn-size-m-font: $font-size-body-1 !default;
/// size
/// @namespace size/icon
$btn-size-m-icon-size: $icon-xs !default;
/// margin
/// @namespace size/icon
$btn-size-m-icon-margin: $s-1 !default;
/// split icon
/// @namespace size/icon
$btn-size-m-icon-split-size: $icon-xs !default;
```

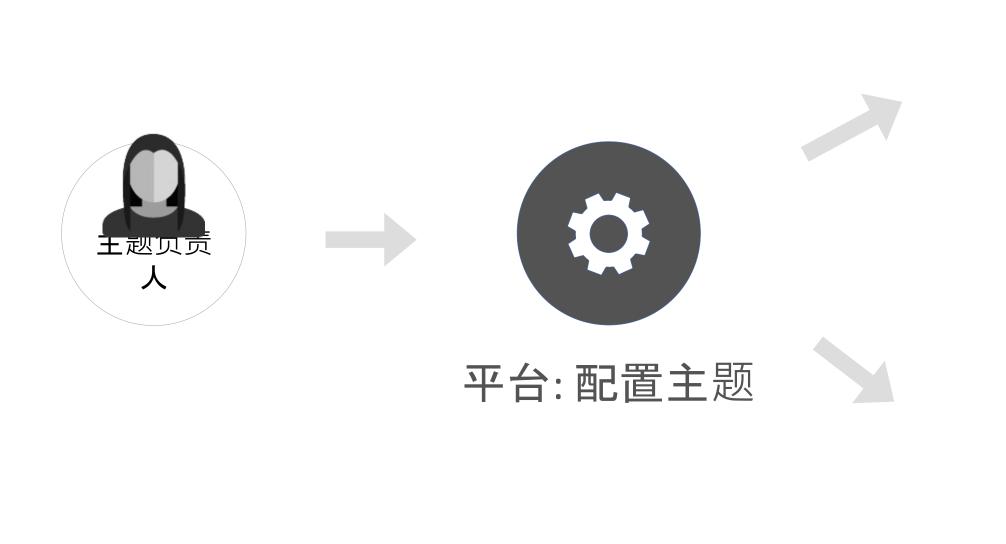

2 规范一致性要求 vs 设计与开发协同的问题

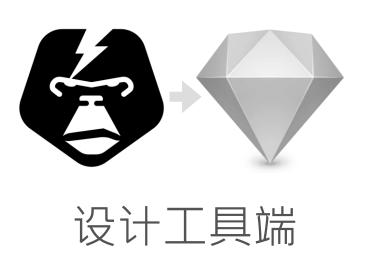

需要一套落实品牌皮肤一致性的工作流机制

## 自上而下品牌化的落成-解决品牌一致性问题

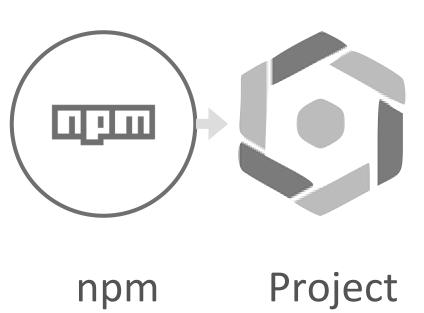

## 工作流

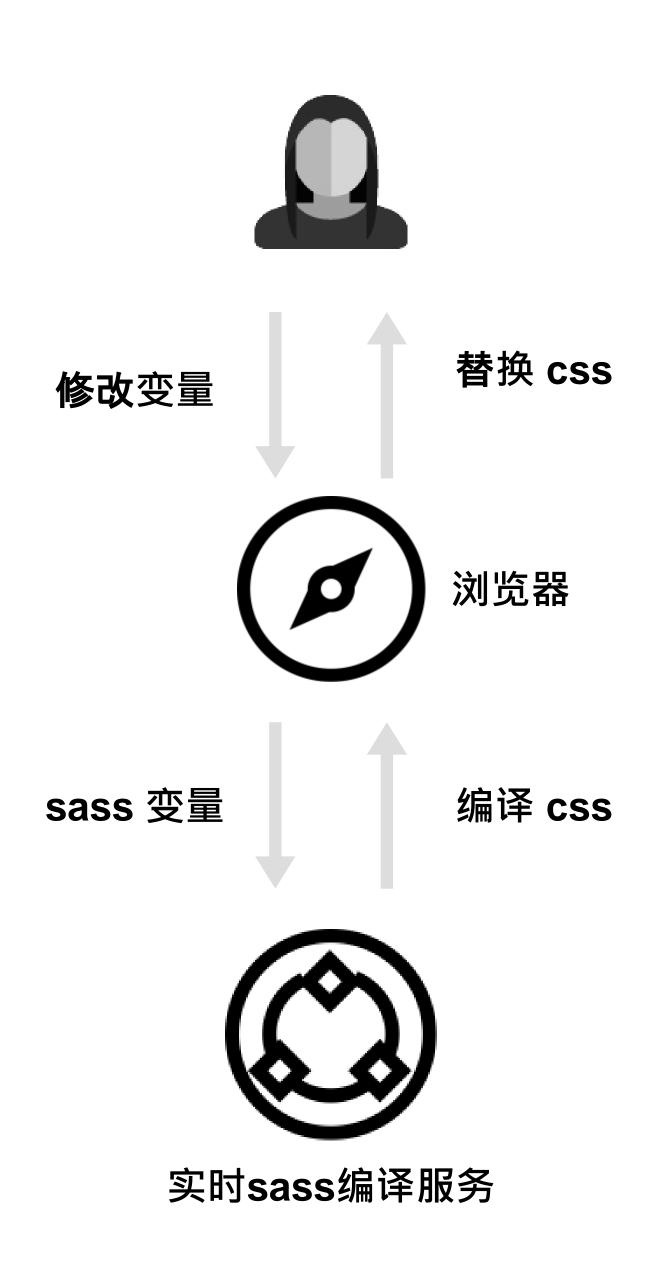

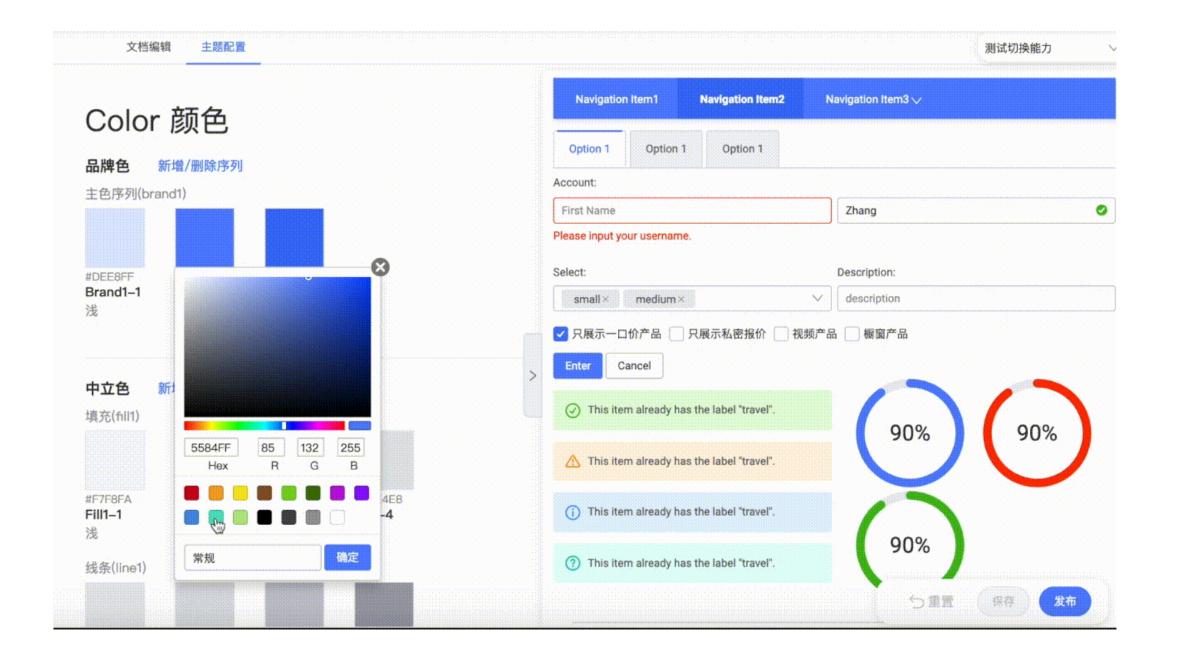

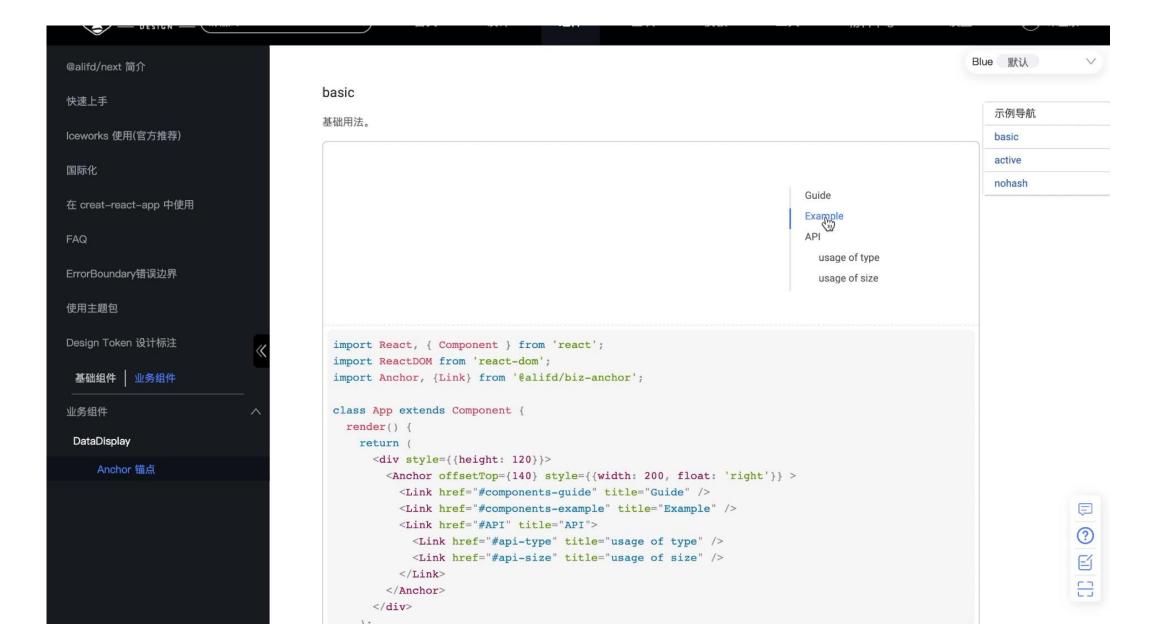

## 变量实时编译

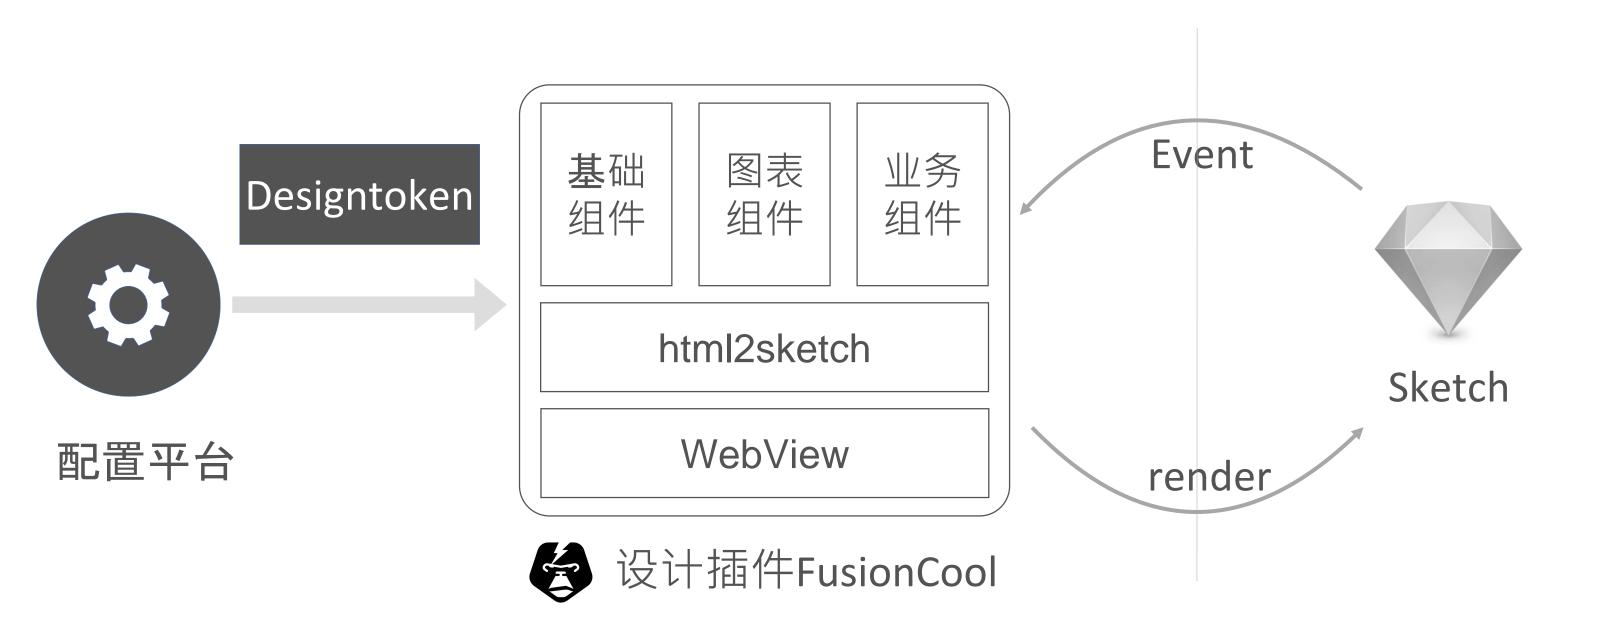

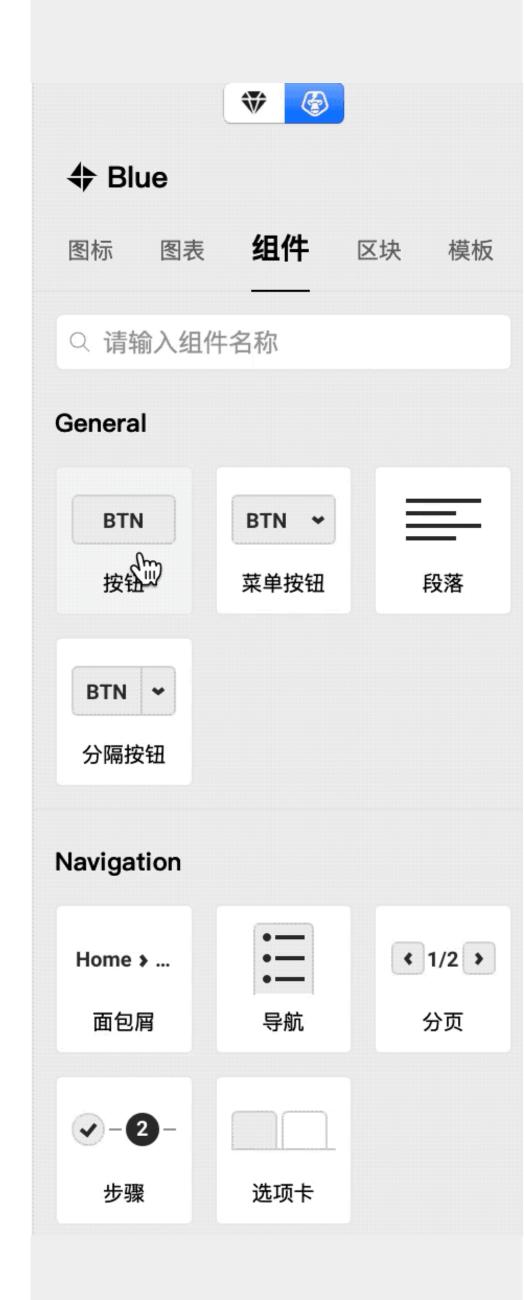

业务组件实时编译

### 设计端插件核心

组件通过 html2sketch 技术渲染到sketch

## 阿里内部使用现状

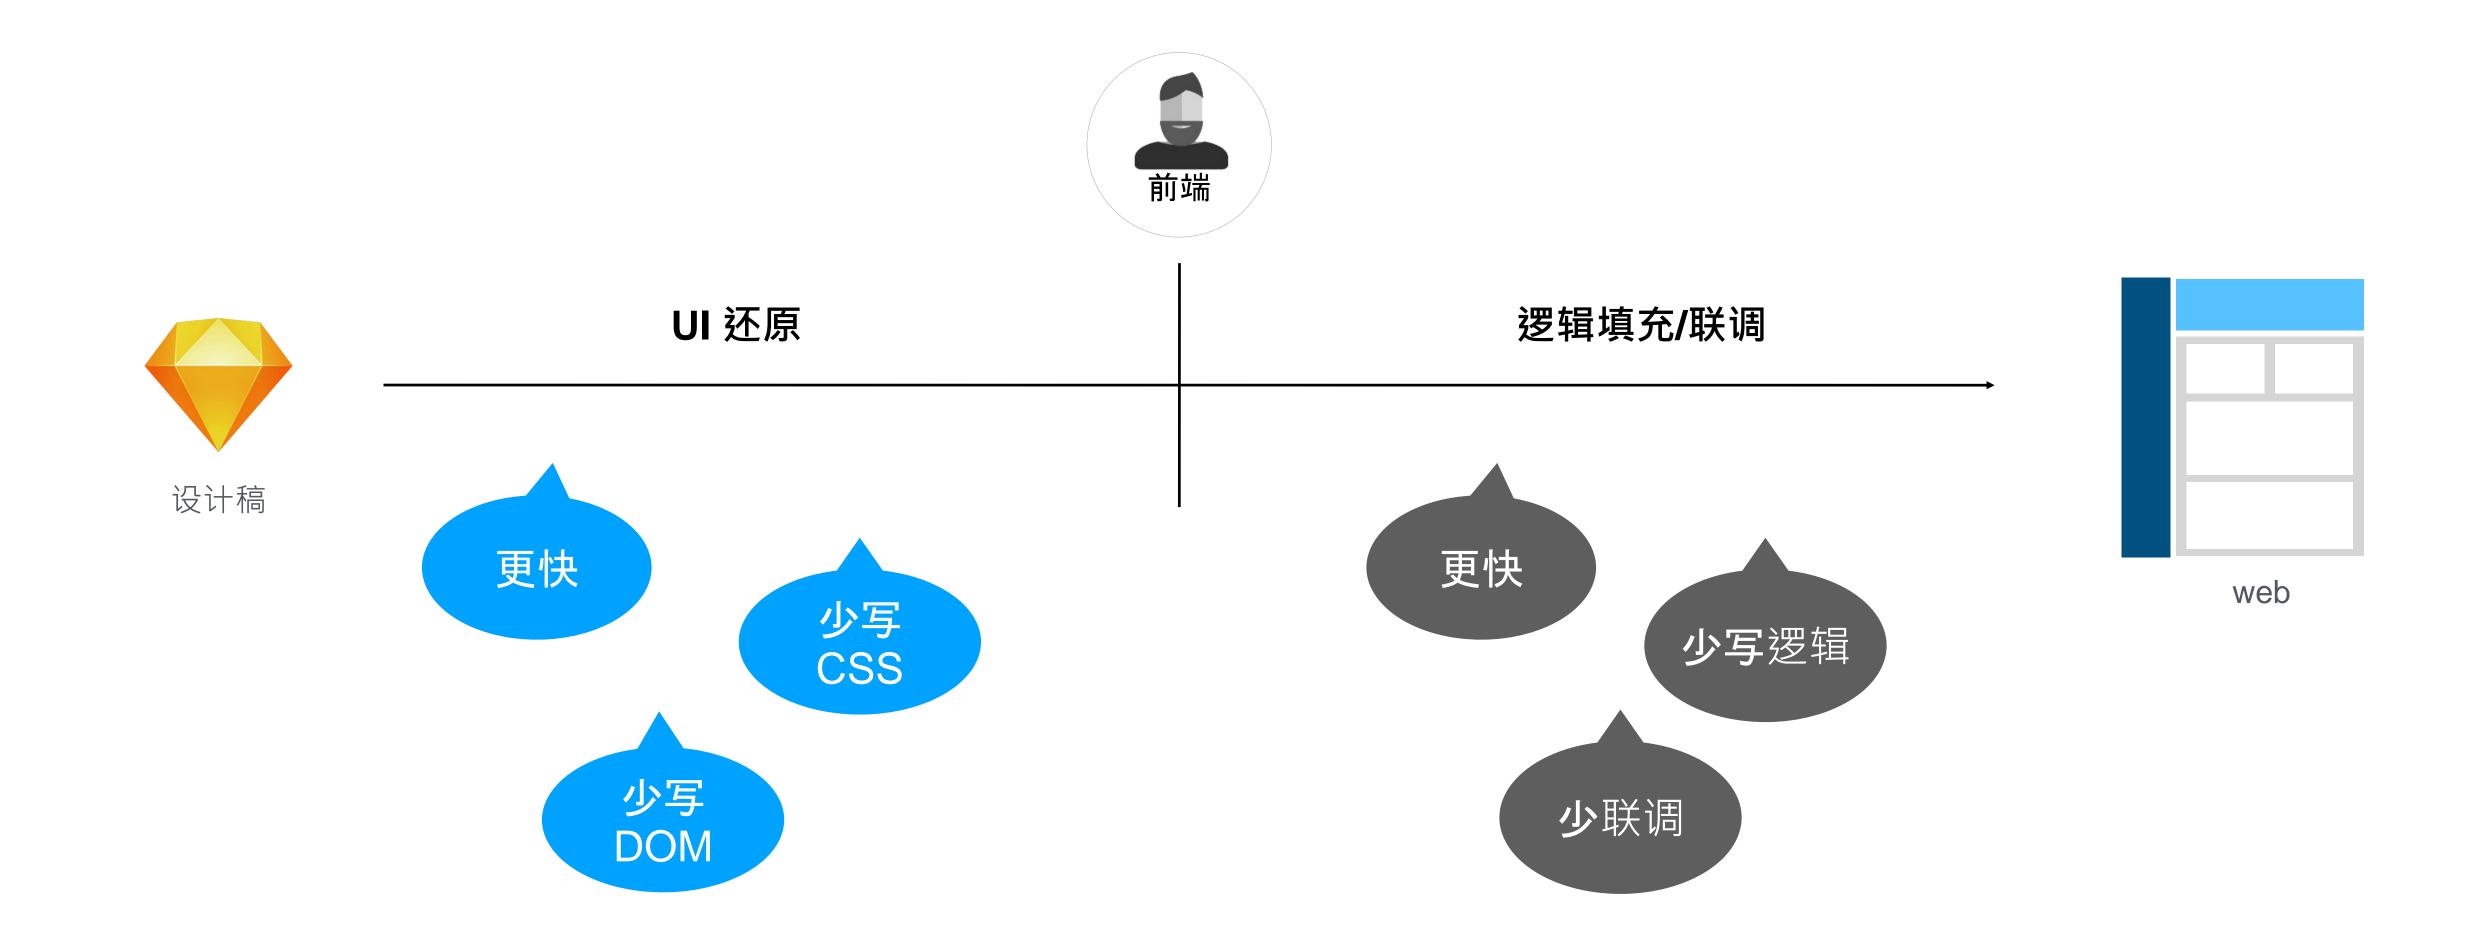

# Part 3: 进一步提效的思考

思路与大家一起探讨

#### 完成了组件UI能力定制 完成工作流串联

是否就彻底的解决了页面问题?如何还能进一步提效?

## 全链路的看工作流问题

如何让UI还原更快,更少的写 HTML/CSS 代码?

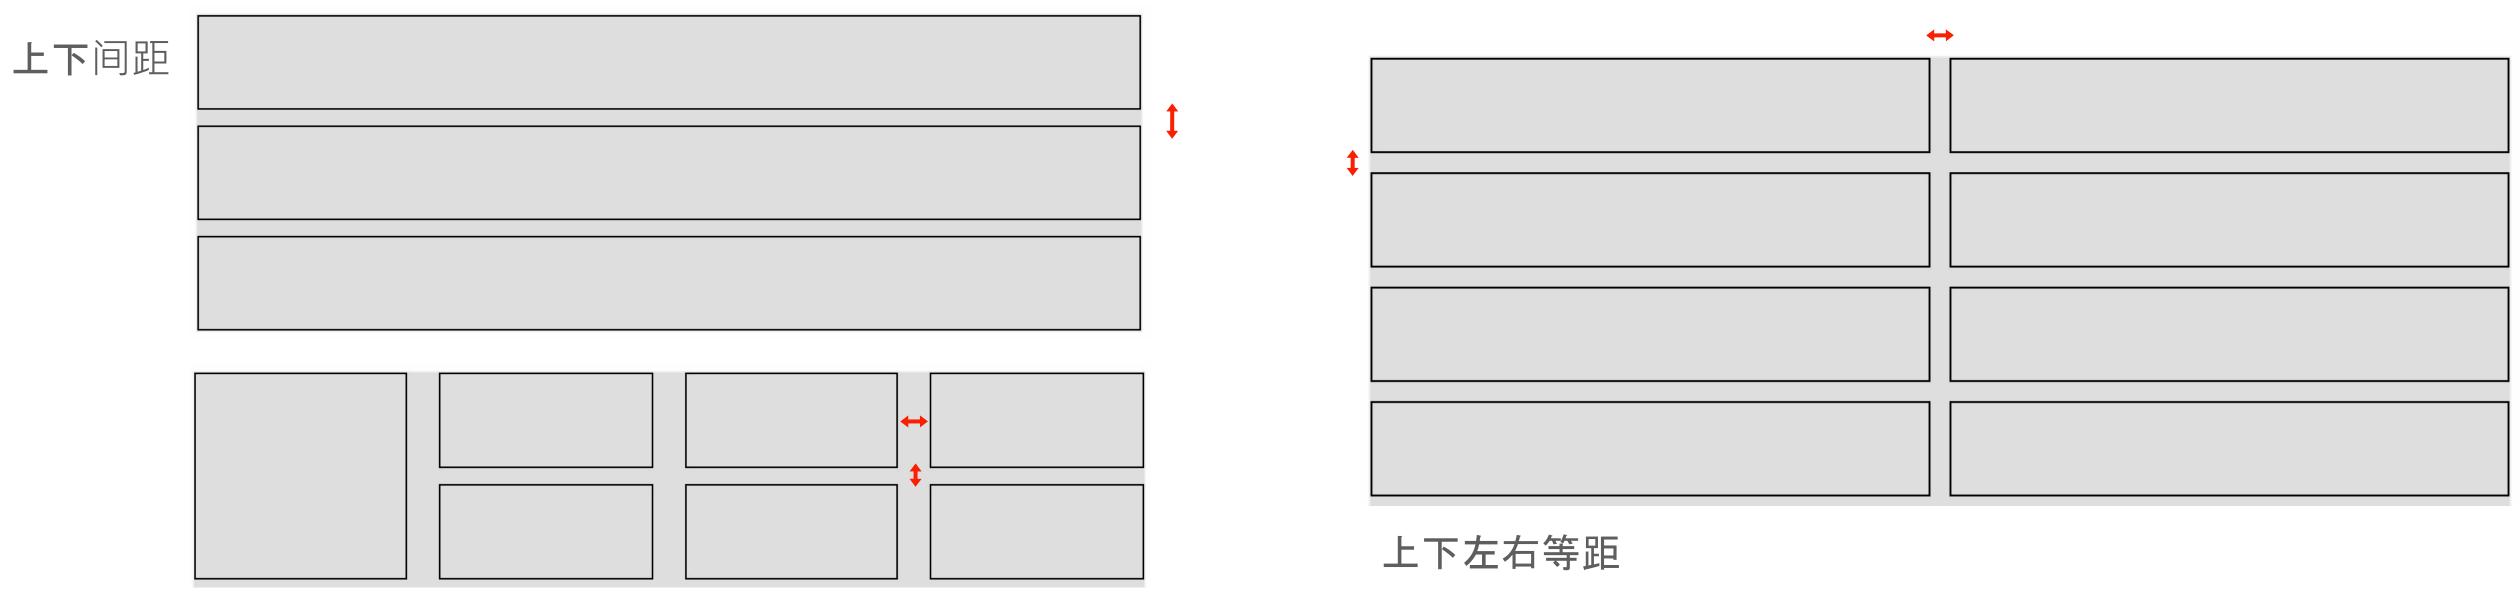

2 如何让逻辑和联调更快?

如何让UI还原更快,更少的写 HTML/CSS 代码?

## 组件问题 -> 页面问题

## 布局问题:排列问题和间距问题

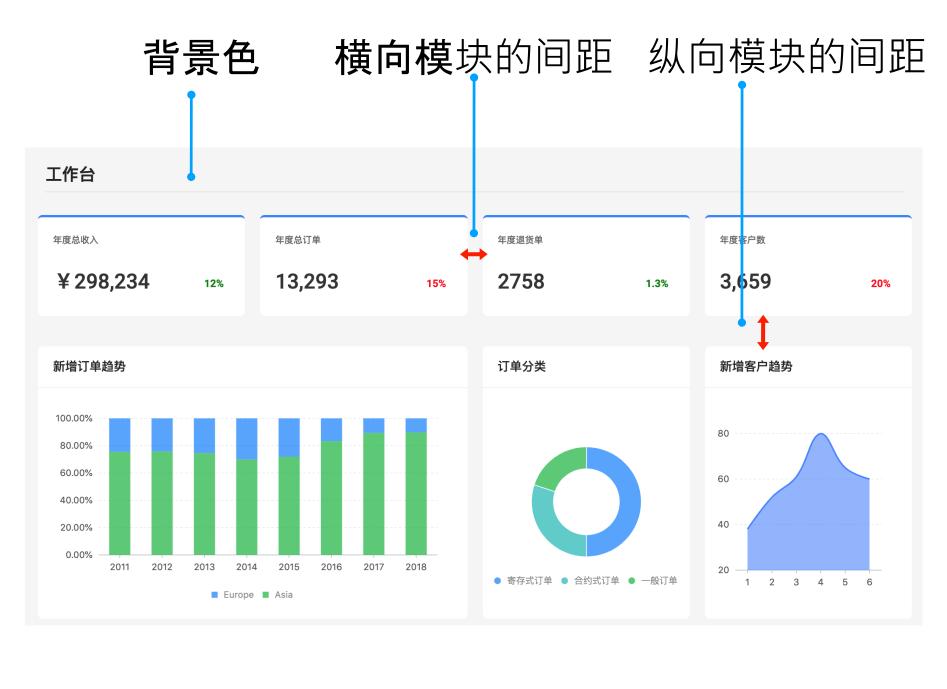

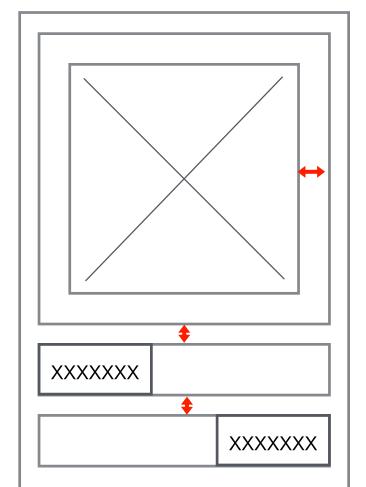

上下左右不等距离

设计师视角:**间距 前**端视角:margin/padding 后端视角:**间距** 

## 内容区:组件之间的间距问题

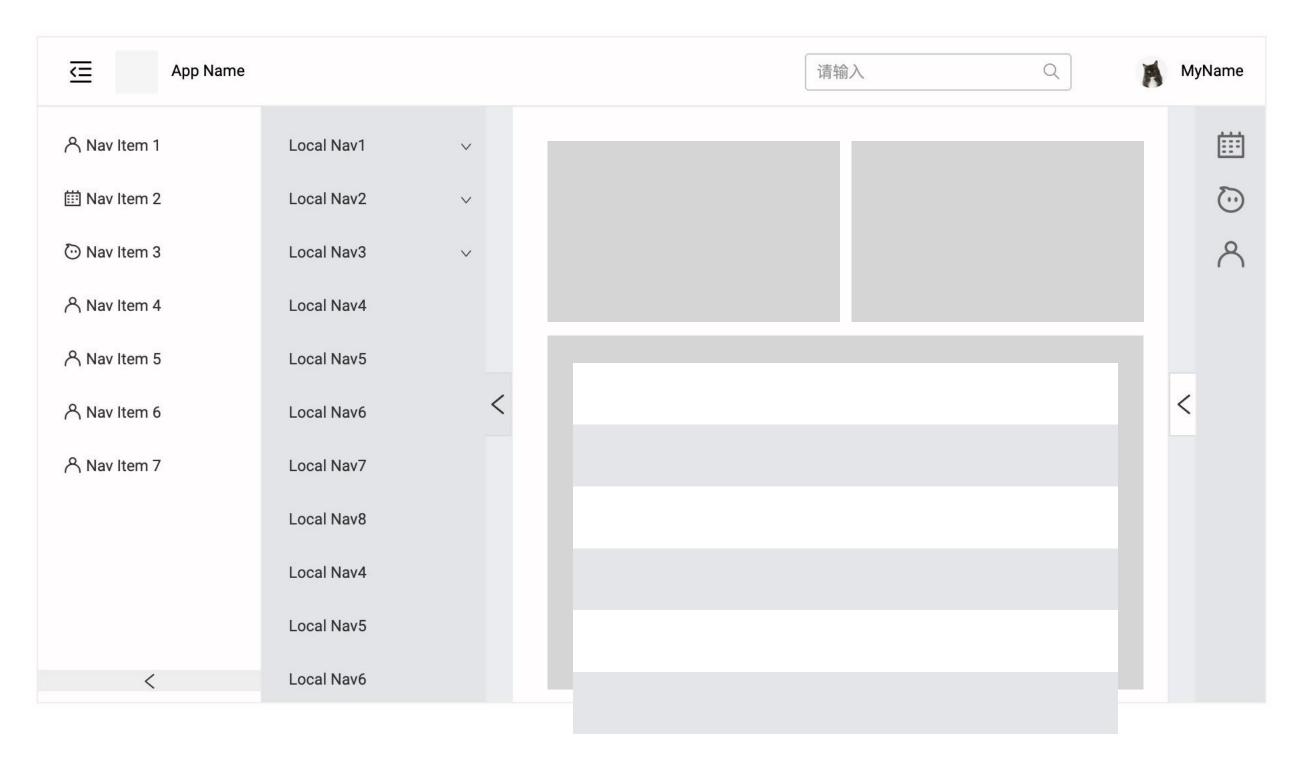

组件之间的间距

### 理论持续升级: 解决布局和间距之间的问题

去除组件排列的胶水代码

## 如何让逻辑和联调更快?

能力复用

## 统一工程体系和方案:有能力可用

商家后台

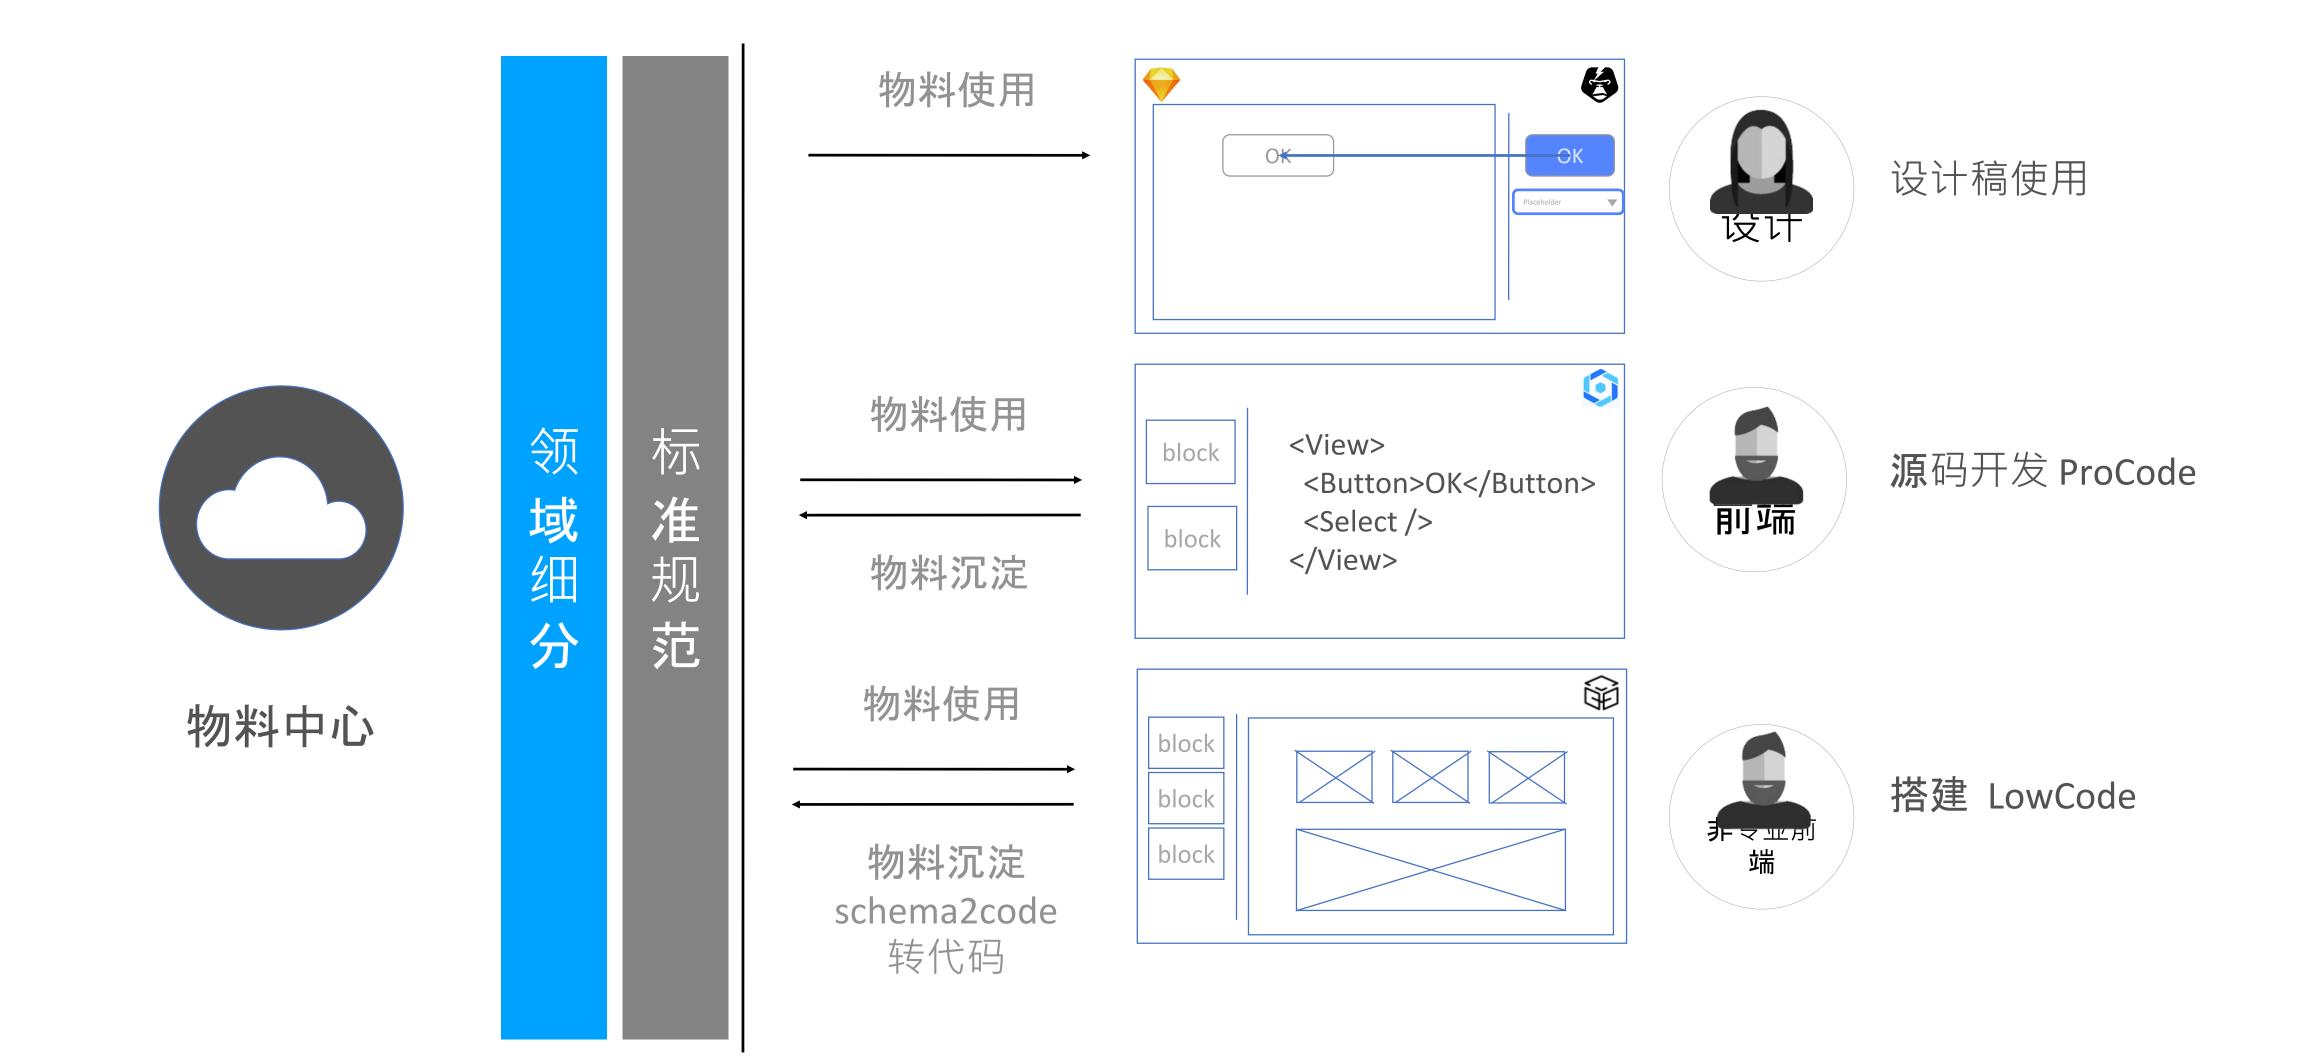

领域

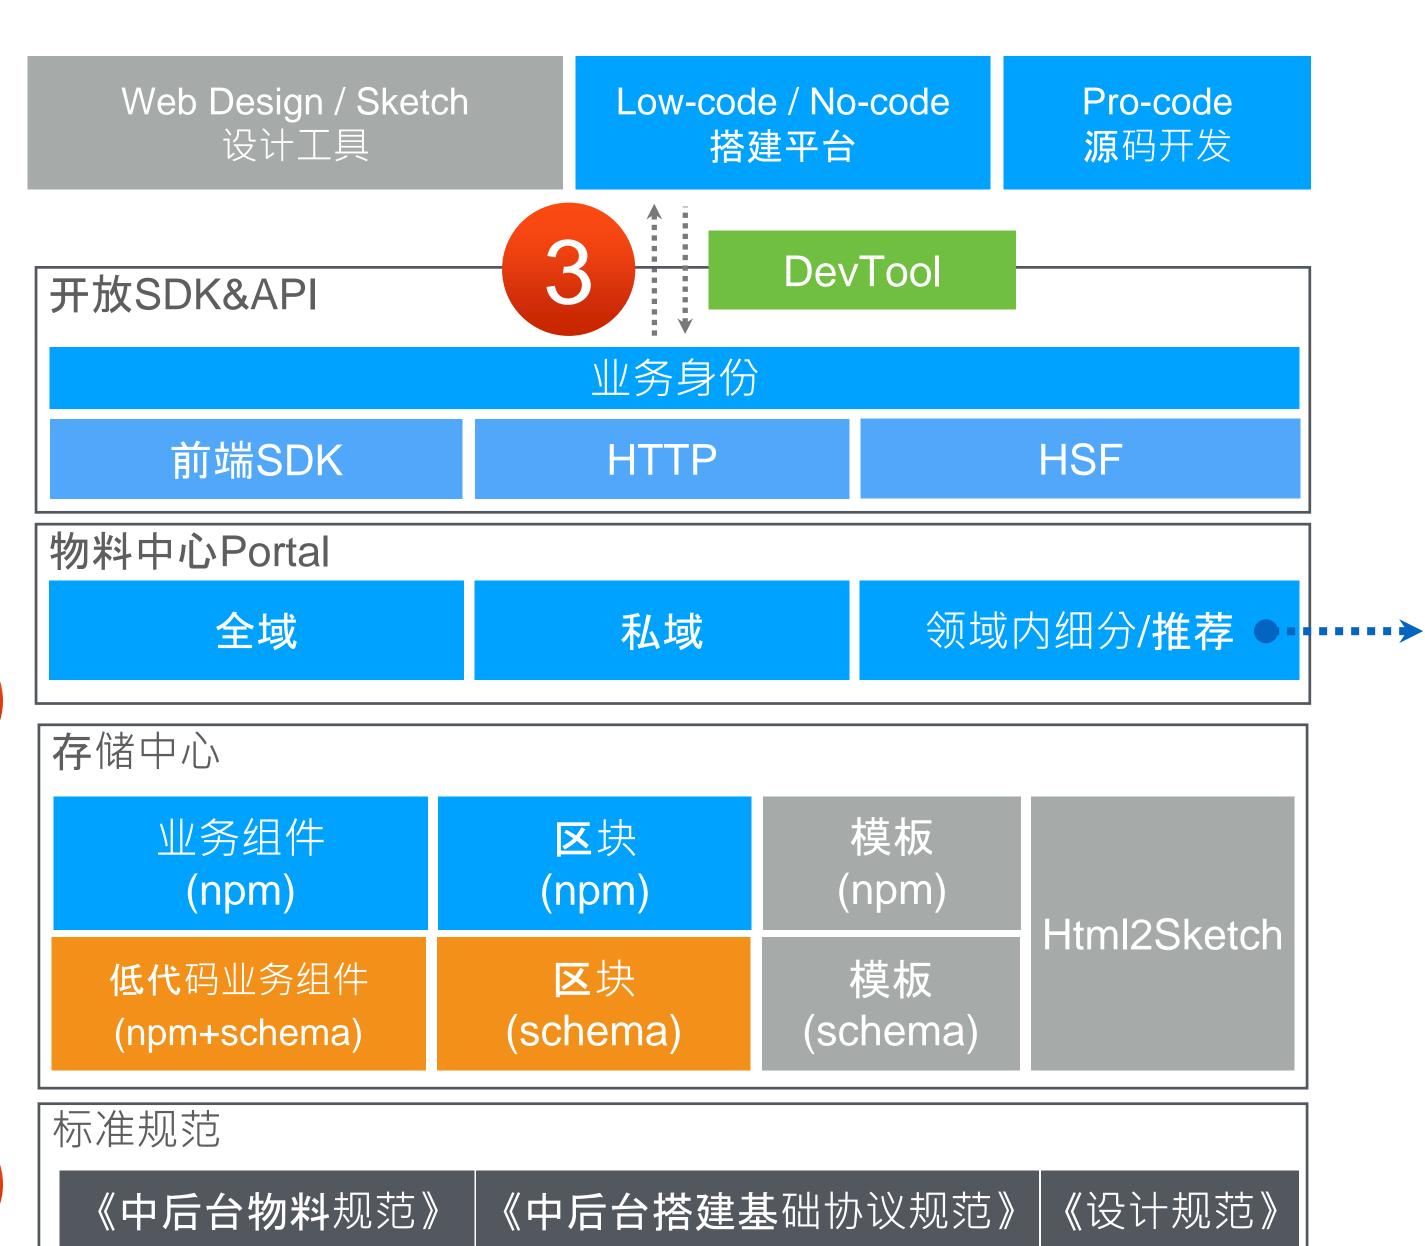

内部控制台

财务

## 物料的沉淀和复用:让大家的物料都能进来

#### 集团物料流通:精品物料上浮分类提供复用
